Certain investment limitations and guidelines

The following limitations and guidelines are considered at the time of purchase, under normal circumstances, and are based on a percentage of each fund's net assets unless otherwise noted. This summary is not intended to reflect all of the fund's investment limitations.

Managed Risk Growth Fund

- The fund pursues its investment objective by:
 - seeking to invest:
 - 85% of its assets in shares of American Funds Insurance Series - Growth Fund (the "Growth Fund"), and
 - the remainder of its assets in shares of American Funds Insurance Series - The Bond Fund of America ("The Bond Fund of America") and in cash, financial futures and options,
 - while seeking to manage portfolio volatility and risk of loss through the use of hedge instruments, including positions in exchange-traded options and futures contracts.
- The goal of the fund's managed risk strategy is to stabilize the volatility of the fund around a target volatility level and reduce the downside exposure of the fund during periods of significant market declines. In situations of extreme market volatility, the positions held in exchange-traded equity index put options and in exchange-traded equity index futures could potentially eliminate the fund's net economic exposure to equity securities.
- The fund will hold cash, cash equivalents, money market fund shares and/or U.S. Treasury futures.
- The fund invests in hedge instruments pursuant to an order from the U.S. Securities and Exchange Commission granting an exemption from Rule 12d1-2(a) under the Investment Company Act of 1940 (File No. 812-14007 / Release No. 30033).

The following limitations and guidelines are applicable to the Growth Fund:

General

- The Growth Fund invests at least 65% of its assets in common stocks.

Investing outside the U.S.

- The Growth Fund may invest up to 25% of its assets in securities of issuers domiciled outside the United States.
- In determining the domicile of an issuer, the Growth Fund's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

Debt instruments

- The Growth Fund may invest up to 10% of its assets in straight debt securities (i.e., debt securities that do not have equity conversion or purchase rights) rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the Growth Fund or unrated but determined to be of equivalent quality by the Growth Fund's investment adviser. The Growth Fund currently intends to look to the ratings from Moody's Investors Services, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the Growth Fund's investment policies.

The following limitations and guidelines are applicable to The Bond Fund of America:

- The fund will invest at least 80% of its assets in bonds and other debt instruments, including cash equivalents and certain preferred securities. For purposes of this investment guideline, investments may be represented by derivative instruments, such as futures contracts and swap agreements.
- The fund will invest at least 60% of its assets in debt securities rated A3 or better or A- or better by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser, and in U.S. government securities, money market instruments, cash or cash equivalents. The fund currently intends to look to the ratings from Moody's Investors Service, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the fund's investment policies.
- The fund may invest up to 40% of its assets in debt securities rated below A3 and below A- by NRSROs designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser.
- The fund may invest up to 10% of its assets in debt securities rated Ba1 or below and BB+ or below by NRSROs designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser.
- While the fund may not make direct purchases of common stocks or warrants or rights to acquire common stocks, the fund may invest in debt securities that are issued together with common stock or other equity interests or in securities that have equity conversion, exchange or purchase rights. The fund may hold up to 5% of its assets in common stock, warrants and rights acquired after sales of the corresponding debt securities or received in exchange for debt securities.
- In determining the domicile of an issuer, The Bond Fund of America's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

Managed Risk International Fund

- The fund pursues its investment objective by:
 - seeking to invest:
 - 85% of its assets in shares of American Funds Insurance Series - International Fund (the "International Fund"), and
 - the remainder of its assets in shares of The Bond Fund of America and in cash, financial futures and options,
 - while seeking to manage portfolio volatility and risk of loss through the use of hedge instruments, including positions in exchange-traded options and futures contracts.
- The goal of the fund's managed risk strategy is to stabilize the volatility of the fund around a target volatility level and reduce the downside exposure of the fund during periods of significant market declines. In situations of extreme market volatility, the positions held in exchange-traded equity index put options and in exchange-traded equity index futures could potentially eliminate the fund's net economic exposure to equity securities.
- The fund will also hold cash, cash equivalents, money market fund shares and/or U.S. Treasury futures.
- The fund invests in hedge instruments pursuant to an order from the U.S. Securities and Exchange Commission granting an exemption from Rule 12d1-2(a) under the Investment Company Act of 1940 (File No. 812-14007 / Release No. 30033).

The following limitations and guidelines are applicable to the International Fund:

General

- The International Fund invests at least 65% of its assets in common stocks of companies domiciled outside the United States.

Debt instruments

- The International Fund may invest up to 5% of its assets in straight debt securities rated Baa1 or below and BBB+ or below by Nationally Recognized Statistical Rating Organizations, or NRSROs or in unrated securities that are determined to be of equivalent quality by the International Fund's investment adviser. The International Fund currently intends to look to the ratings from Moody's Investors Services, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the International Fund's investment policies.

Investing outside the U.S.

- In determining the domicile of an issuer, the International Fund's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

The following limitations and guidelines are applicable to The Bond Fund of America:

- The fund will invest at least 80% of its assets in bonds and other debt instruments, including cash equivalents and certain preferred securities. For purposes of this investment guideline, investments may be represented by derivative instruments, such as futures contracts and swap agreements.
- The fund will invest at least 60% of its assets in debt securities rated A3 or better or A- or better by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser, and in U.S. government securities, money market instruments, cash or cash equivalents. The fund currently intends to look to the ratings from Moody's Investors Service, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the fund's investment policies.
- The fund may invest up to 40% of its assets in debt securities rated below A3 and below A- by NRSROs designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser.
- The fund may invest up to 10% of its assets in debt securities rated Ba1 or below and BB+ or below by NRSROs designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser.
- While the fund may not make direct purchases of common stocks or warrants or rights to acquire common stocks, the fund may invest in debt securities that are issued together with common stock or other equity interests or in securities that have equity conversion, exchange or purchase rights. The fund may hold up to 5% of its assets in common stock, warrants and rights acquired after sales of the corresponding debt securities or received in exchange for debt securities.
- In determining the domicile of an issuer, The Bond Fund of America's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

Managed Risk Washington Mutual Investors Fund

- The fund pursues its investment objectives by:
 - seeking to invest:
 - 85% of its assets in shares of American Funds Insurance Series - Washington Mutual Investors Fund (the "Washington Mutual Investors Fund"), and
 - the remainder of its assets in shares of American Funds Insurance Series - U.S. Government Securities Fund (the "Government Fund") and in cash and financial futures,
 - while seeking to manage portfolio volatility and risk of loss through the use of hedge instruments, including positions in exchange-traded options and futures contracts.
- The goal of the fund's managed risk strategy is to stabilize the volatility of the fund around a target volatility level and reduce the downside exposure of the fund during periods of significant market declines. In situations of extreme market volatility, the positions held in exchange-traded equity index put options and in exchange-traded equity index futures could potentially eliminate the fund's net economic exposure to equity securities.
- The fund will also hold cash, cash equivalents, money market fund shares and/or U.S. Treasury futures.
- The fund invests in hedge instruments pursuant to an order from the U.S. Securities and Exchange Commission granting an exemption from Rule 12d1-2(a) under the Investment Company Act of 1940 (File No. 812-14007 / Release No. 30033).

The following limitations and guidelines are applicable to the Washington Mutual Investors Fund:

General

- As set forth in its prospectus, generally, common stocks and securities convertible into common stocks of issuers on the fund's Eligible List may be purchased by the fund; however, the fund may also hold, to a limited extent, short-term U.S. government securities, cash and cash equivalents.
- Normally, the fund invests at least 80% of its assets in dividend-paying common stocks of companies of larger, more established companies domiciled in the United States with market capitalizations greater than \$4.0 billion. Though the fund's investment adviser does not intend to change the manner in which the fund is managed, this investment guideline will be phased out as a disclosed limit on or about November 1, 2021.

Investing outside the U.S.

- The fund may invest up to 10% of its assets in securities of certain companies domiciled outside the United States (that is, not organized under the laws of the United States or any state thereof or the District of Columbia) and not included in the S&P 500 Index as further described below under "The fund and its investment policies."

- In determining the domicile of an issuer, the fund's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

The following limitations and guidelines are applicable to the Government Fund:

- The fund will invest at least 80% of its assets in securities (including cash equivalents) guaranteed or sponsored by the U.S. government, its agencies and instrumentalities, including bonds and other debt securities. For purposes of this investment guideline, investments may be represented by derivative instruments, such as futures contracts and swap agreements.
- Securities (excluding cash equivalents) not guaranteed or sponsored by the U.S. government, its agencies or instrumentalities held by the fund will be rated AAA or Aaa by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the fund's investment adviser or unrated securities determined to be of equivalent quality by the fund's investment adviser. The fund currently intends to look to the ratings from Moody's Investors Service, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the fund's investment policies.
- All securities held by the fund will be denominated in U.S. dollars.

Managed Risk Growth-Income Fund

- The fund pursues its investment objectives by:
 - seeking to invest:
 - 80% of its assets in shares of American Funds Insurance Series - Growth-Income Fund (the "Growth-Income Fund"), and
 - the remainder of its assets in shares of The Bond Fund of America and in cash, financial futures and options,
 - while seeking to manage portfolio volatility and risk of loss through the use of hedge instruments, including positions in exchange-traded options and futures contracts.
- The goal of the fund's managed risk strategy is to stabilize the volatility of the fund around a target volatility level and reduce the downside exposure of the fund during periods of significant market declines. In situations of extreme market volatility, the positions held in exchange-traded equity index put options and in exchange-traded equity index futures could potentially eliminate the fund's net economic exposure to equity securities.
- The fund will also hold cash, cash equivalents, money market fund shares and/or U.S. Treasury futures.
- The fund invests in hedge instruments pursuant to an order from the U.S. Securities and Exchange Commission granting an exemption from Rule 12d1-2(a) under the Investment Company Act of 1940 (File No. 812-14007 / Release No. 30033).

The following limitations and guidelines are applicable to the Growth-Income Fund:

General

- The Growth-Income Fund invests primarily in common stocks or other securities that demonstrate the potential for appreciation and/or dividends.

Investing outside the U.S.

- The Growth-Income Fund may invest up to 15% of its assets in securities of issuers domiciled outside the United States.
- In determining the domicile of an issuer, the Growth-Income Fund's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

Debt instruments

- The Growth-Income Fund may invest up to 5% of its assets in straight debt securities rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations, or NRSROs, or unrated but determined to be of equivalent quality by the Growth-Income Fund's investment adviser. The Growth-Income Fund currently intends to look to the ratings from Moody's Investors Services, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the Growth-Income Fund's investment policies.

The following limitations and guidelines are applicable to The Bond Fund of America:

- The fund will invest at least 80% of its assets in bonds and other debt instruments, including cash equivalents and certain preferred securities. For purposes of this investment guideline, investments may be represented by derivative instruments, such as futures contracts and swap agreements.
- The fund will invest at least 60% of its assets in debt securities rated A3 or better or A- or better by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser, and in U.S. government securities, money market instrument, cash or cash equivalents. The fund currently intends to look to the ratings from Moody's Investors Service, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the fund's investment policies.
- The fund may invest up to 40% of its assets in debt securities rated below A3 and below A- by NRSROs designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser.
- The fund may invest up to 10% of its assets in debt securities rated Ba1 or below and BB+ or below by NRSROs designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser.

- While the fund may not make direct purchases of common stocks or warrants or rights to acquire common stocks, the fund may invest in debt securities that are issued together with common stock or other equity interests or in securities that have equity conversion, exchange or purchase rights. The fund may hold up to 5% of its assets in common stock, warrants and rights acquired after sales of the corresponding debt securities or received in exchange for debt securities.
- In determining the domicile of an issuer, The Bond Fund of America's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

Managed Risk Asset Allocation Fund

- The fund pursues its investment objective by:
 - investing in shares of American Funds Insurance Series - Asset Allocation Fund (the "Asset Allocation Fund") and in cash and/or U.S. Treasury futures,
 - while seeking to manage portfolio volatility and risk of loss through the use of hedge instruments, including positions in exchange-traded options and futures contracts.
- The goal of the fund's managed risk strategy is to stabilize the volatility of the fund around a target volatility level and reduce the downside exposure of the fund during periods of significant and sustained market declines. In situations of extreme market volatility, the positions held in exchange-traded equity index put options and in exchange-traded equity index futures could potentially eliminate the fund's net economic exposure to equity securities.
- The fund will hold cash, cash equivalents and/or money market fund shares.
- The fund invests in hedge instruments pursuant to an order from the U.S. Securities and Exchange Commission granting an exemption from Rule 12d1-2(a) under the Investment Company Act of 1940 (File No. 812-14007 / Release No. 30033).

The following limitations and guidelines are applicable to the Asset Allocation Fund, the fund's underlying fund:

General

- Under normal market conditions, the Asset Allocation Fund generally invests 40% to 80% of its assets in equity securities; 20% to 50% in debt securities; and 0% to 40% in money market instruments and cash.

Debt instruments

- Up to 25% of the Asset Allocation Fund's debt assets may be invested in straight debt securities rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations, or NRSROs, or unrated but determined to be of equivalent quality by the Asset Allocation Fund's investment adviser. The Asset Allocation Fund currently intends to look to the ratings from Moody's Investors Services, Standard & Poor's Ratings Services and Fitch Ratings. If rating agencies differ, securities will be considered to have received the highest of these ratings, consistent with the Asset Allocation Fund's investment policies.

Investing outside the U.S.

- The Asset Allocation Fund may invest up to 15% of its assets in equity securities of issuers domiciled outside the United States.
- The Asset Allocation Fund may invest up to 5% of its assets in debt securities of issuers domiciled outside the United States.
- In determining the domicile of an issuer, the Asset Allocation Fund's investment adviser will consider the domicile determination of a leading provider of global indexes, such as Morgan Stanley Capital International, and may also take into account such factors as where the issuer's securities are listed and where the issuer is legally organized, maintains principal corporate offices, conducts its principal operations and/or generates revenues.

* * * * *

The funds may experience difficulty liquidating certain portfolio securities during significant market declines or periods of heavy redemptions.

Description of certain securities, investment techniques and risks

The descriptions below are intended to supplement the material in the prospectus under "Investment objectives, strategies and risks" which provides information about the funds and the underlying funds.

The funds

The following descriptions of securities and techniques apply to the funds.

Options – An option on a security (or an index) is a contract that gives the holder of the option, in return for a premium payment, the right to buy from (in the case of a call) or sell to (in the case of a put) the writer of the option the security underlying the option (or the cash value of the index underlying the option) at a specified exercise price. The writer of an option on a security has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price (in the case of a call) or to pay the exercise price upon delivery of the underlying security (in the case of a put). Upon exercise, the writer of an option on an index is obligated to pay the difference between the cash value of the index and the exercise price multiplied by a specified multiplier for the index option.

As part of its managed risk strategy, the fund will purchase put options on equity indexes in standardized contracts traded on foreign or domestic securities exchanges, boards of trade, or similar entities. By purchasing a put option, the fund obtains the right (but not the obligation) to sell the instrument underlying the option (or the cash value of the index underlying the option) at a specified exercise price, referred to as the strike price. In return for this right, the fund pays the current market price, or the option premium, for the option. The fund may terminate its position in a put option by allowing the option to expire or by exercising the option. If the option is allowed to expire, the fund will lose the entire premium. If the option is exercised, the fund completes the sale of the underlying instrument (or delivers the cash value of the index underlying the option) at the strike price. The fund may also terminate a put option position by entering into opposing close-out transactions in advance of the option expiration date.

As a buyer of a put option, the fund can expect to realize a gain if the price of the underlying instrument or index falls substantially. However, if the price of the underlying instrument or index does not fall enough to offset the cost of purchasing the option, the fund can expect to suffer a loss, albeit a loss limited to the amount of the option premium plus any applicable transaction costs.

As part of its managed risk strategy, the fund may also purchase exchange-traded equity index call options. The features of call options are essentially the same as those of put options, except that the purchaser of a call option obtains the right (but not the obligation) to purchase, rather than sell, the underlying instrument (or the cash value of the index underlying the option) at the specified strike price. The buyer of a call option typically attempts to participate in potential price increases of the underlying instrument or index with risk limited to the cost of the option if the price of the underlying instrument or index falls. At the same time, the call option buyer can expect to suffer a loss if the price of the underlying instrument or index does not rise sufficiently to offset the cost of the option.

Although the fund's investment adviser and subadviser expect that the fund will, at all times, retain a net long position in exchange-traded equity index put options, in certain market conditions, the fund may sell, or write, options on equity indexes. The writer of a put or call option takes the opposite side of the transaction from the option's purchaser. In return for receipt of the option premium, the writer assumes the obligation to pay or receive the strike price for the option's underlying instrument or index if the other party to the option chooses to exercise it. The writer may seek to terminate a position in a put option before exercise by closing out the option. If the market for the relevant put option is not liquid, however, the writer must continue to be prepared to pay the strike price while the option is outstanding, regardless of price changes.

If the price of the underlying instrument or index rises, a put writer would generally expect to profit, although its gain would be limited to the amount of the premium it received. If the price of the underlying instrument or index remains the same over time, it is likely that the writer would also profit because it should be able to close out the option at a lower price. If the price of the underlying instrument or index falls, the put writer would expect to suffer a loss. This loss should be less than the loss from purchasing the underlying instrument or exposure to the underlying index directly, however, because the premium received for writing the option should mitigate the effects of the decline.

Writing a call option obligates the writer to sell or deliver the option's underlying instrument or to make a net cash settlement payment, as applicable, in return for the strike price upon exercise of the option. The characteristics of writing call options are similar to those of writing put options, except that writing calls generally is a profitable strategy if prices remain the same or fall. Through receipt of the option premium, a call writer should mitigate the effects of a price increase. At the same time, because a call writer must be prepared to deliver the underlying instrument or make a net cash settlement payment, as applicable, in return for the strike price, even if its current value is greater, a call writer gives up some ability to participate in security price increases.

The fund will cover its obligations when it writes call or put options. For a call option on an index, the option is covered if the fund maintains with its custodian liquid assets in an amount equal to the fund's net obligation under the option. A written call option is also covered if the fund holds a call on the same index as the call written where the exercise price of the call held is (i) equal to or less than the exercise price of the call written or (ii) greater than the exercise price of the call written, provided the difference is maintained by the fund in segregated liquid assets. A written put option on an index is covered if the fund segregates liquid assets equal to the exercise price. A put option on an index is also covered if the fund holds a put on the same index as the put written where the exercise price of the put held is (i) equal to or greater than the exercise price of the put written or (ii) less than the exercise price of the put written, provided the difference is maintained by the fund in segregated liquid assets. Obligations under written call and put options so covered will not be deemed to be senior securities for the purposes of the fund's investment restrictions concerning senior securities and borrowings.

Several risks are associated with transactions in options on securities and on indexes. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, effectively causing a given transaction not to achieve its objectives. When a put or call option on a particular security or index is purchased to hedge against price movements in a related security or index, the price to close out the put or call option may move more or less than the price of the related security or index.

Options prices can diverge from the prices of their underlying instruments or indexes for a number of reasons. Options prices are affected by such factors as current and anticipated short-term interest rates, changes in volatility of the underlying instrument or index, and the time remaining until expiration of the contract, which may not affect security prices in the same way. Imperfect correlation may also result from differing levels of demand in the options and futures markets and the securities markets, from structural differences in how options and futures and securities are traded, or from imposition of daily price fluctuation limits or trading halts. The fund may purchase or sell options contracts with a greater or lesser value than the securities it wishes to hedge or intends to purchase in order to attempt to compensate for differences in volatility between the contract and the securities, although this may not be successful in all cases. If price changes in the fund's options positions are poorly correlated with its other investments, the positions may fail to produce anticipated gains or result in losses that are not offset by gains in other investments.

There is no assurance that a liquid market will exist for any particular options contract at any particular time. Options may have relatively low trading volumes and liquidity if their strike prices are not close to the current prices of the underlying instruments or indexes. In addition, exchanges may establish daily

price fluctuation limits for exchange-traded options contracts and may halt trading if a contract's price moves upward or downward more than the limit in a given day. On volatile trading days when the price fluctuation limit is reached or a trading halt is imposed, it may be impossible to enter into new positions or to close out existing positions. If the market for a contract is not liquid because of price fluctuation limits or otherwise, it could prevent prompt liquidation of unfavorable positions and could potentially require the fund to continue to hold a position until delivery or expiration regardless of changes in its value. As a result, the fund's access to other assets held to cover its options positions could also be impaired.

Combined positions involve purchasing and writing options in combination with each other, or in combination with futures or forward contracts, in order to adjust the risk and return profile of the fund's overall position. For example, purchasing a put option and writing a call option on the same underlying instrument or index would construct a combined position whose risk and return characteristics are similar to selling a futures contract. Another possible combined position would involve writing a call option at one strike price and buying a call option at a lower price to reduce the risk of the written call option in the event of a substantial price increase. Because such combined options positions involve multiple trades, they result in higher transaction costs and may be more difficult to open and close out.

Futures – The fund may enter into futures contracts as part of the managed risk strategy. A futures contract is an agreement to buy or sell a security or other financial instrument (the "reference asset") for a set price on a future date. Futures contracts are standardized, exchange-traded contracts, and, when a futures contract is bought or sold, the fund will incur brokerage fees and will be required to maintain margin deposits.

Unlike when the fund purchases or sells a security, such as a stock or bond, no price is paid or received by the fund upon the purchase or sale of a futures contract. When the fund enters into a futures contract, the fund is required to deposit with its futures broker, known as a futures commission merchant (FCM), a specified amount of liquid assets in a segregated account in the name of the FCM at the applicable derivatives clearinghouse or exchange. This amount, known as initial margin, is set by the futures exchange on which the contract is traded and may be significantly modified during the term of the contract. The initial margin is in the nature of a performance bond or good faith deposit on the futures contract, which is returned to the fund upon termination of the contract, assuming all contractual obligations have been satisfied. Additionally, on a daily basis, the fund pays or receives cash, or variation margin, equal to the daily change in value of the futures contract. Variation margin does not represent a borrowing or loan by the fund but is instead a settlement between the fund and the FCM of the amount one party would owe the other if the futures contract expired. In computing daily net asset value, the fund will mark-to-market its open futures positions. In the event of the bankruptcy or insolvency of an FCM that holds margin on behalf of the fund, the fund may be entitled to return of margin owed to it only in proportion to the amount received by the FCM's other customers, potentially resulting in losses to the fund. An event of bankruptcy or insolvency at a clearinghouse or exchange holding initial margin could also result in losses for the fund.

When the fund invests in futures contracts and deposits margin with an FCM, the fund becomes subject to so-called "fellow customer" risk - that is, the risk that one or more customers of the FCM will default on their obligations and that the resulting losses will be so great that the FCM will default on its obligations and margin posted by one customer, such as the fund, will be used to cover a loss caused by a different defaulting customer. Applicable rules generally prohibit the use of one customer's funds to meet the obligations of another customer and limit the ability of an FCM to use margin posed by non-defaulting customers to satisfy losses caused by defaulting customers. As a general matter, an FCM is required to use its own funds to meet a defaulting customer's obligations. While a customer's loss would likely need to be substantial before non-defaulting customers would be exposed to loss on account of fellow customer risk, applicable rules nevertheless permit the commingling of margin and do not limit the mutualization of customer losses from investment losses, custodial failures, fraud or

other causes. If the loss is so great that, notwithstanding the application of an FCM's own funds, there is a shortfall in the amount of customer funds required to be held in segregation, the FCM could default and be placed into bankruptcy. Under these circumstances, bankruptcy law provides that non-defaulting customers will share pro rata in any shortfall. A shortfall in customer segregated funds may also make the transfer of the accounts of non-defaulting customers to another FCM more difficult.

Although certain futures contracts, by their terms, require actual future delivery of and payment for the reference asset, in practice, most futures contracts are usually closed out before the delivery date by offsetting purchases or sales of matching futures contracts. Closing out an open futures contract purchase or sale is effected by entering into an offsetting futures contract sale or purchase, respectively, for the same aggregate amount of the identical reference asset and the same delivery date with the same FCM. If the offsetting purchase price is less than the original sale price (in each case taking into account transaction costs, including brokerage fees), the fund realizes a gain; if it is more, the fund realizes a loss. Conversely, if the offsetting sale price is more than the original purchase price (in each case taking into account transaction costs, including brokerage fees), the fund realizes a gain; if it is less, the fund realizes a loss.

The fund is generally required to segregate liquid assets equivalent to the fund's outstanding obligations under each futures contract. With respect to long positions in futures contracts that are not legally required to cash settle, the fund will segregate or earmark liquid assets in an amount equal to the contract price the fund will be required to pay on settlement less the amount of margin deposited with an FCM. For short positions in futures contracts that are not legally required to cash settle, the fund will segregate or earmark liquid assets in an amount that, when added to the amounts deposited with an FCM as margin, equals the market value of the reference asset underlying the futures contract. With respect to futures contracts that are required to cash settle, however, the fund is permitted to segregate or earmark liquid assets in an amount that, when added to the amounts deposited with an FCM as margin, equals the fund's daily marked-to-market (net) obligation under the contract (i.e., the daily market value of the contract itself), if any; in other words, the fund may set aside its daily net liability, if any, rather than the notional value of the futures contract. By segregating or earmarking assets equal only to its net obligation under cash-settled futures, the fund may be able to utilize these contracts to a greater extent than if the fund were required to segregate or earmark assets equal to the full contract price or current market value of the futures contract. Such segregation of assets is intended to ensure that the fund has assets available to satisfy its obligations with respect to futures contracts and to limit any potential leveraging of the fund's portfolio. However, segregation of liquid assets will not limit the fund's exposure to loss. To maintain a sufficient amount of segregated assets, the fund may also have to sell less liquid portfolio securities at disadvantageous prices, and the earmarking of liquid assets will have the effect of limiting the fund's ability to otherwise invest those assets in other securities or instruments.

The value of a futures contract tends to increase and decrease in tandem with the value of its underlying reference asset. Purchasing futures contracts will, therefore, tend to increase the fund's exposure to positive and negative price fluctuations in the reference asset, much as if the fund had purchased the reference asset directly. When the fund sells a futures contract, by contrast, the value of its futures position will tend to move in a direction contrary to the market for the reference asset. Accordingly, selling futures contracts will tend to offset both positive and negative market price changes, much as if the reference asset had been sold.

There is no assurance that a liquid market will exist for any particular futures contract at any particular time. Futures exchanges may establish daily price fluctuation limits for futures contracts and may halt trading if a contract's price moves upward or downward more than the limit in a given day. On volatile trading days, when the price fluctuation limit is reached and a trading halt is imposed, it may be impossible to enter into new positions or close out existing positions. If the market for a futures contract is not liquid because of price fluctuation limits or other market conditions, the fund may be prevented from promptly liquidating unfavorable futures positions and the fund could be required to

continue to hold a position until delivery or expiration regardless of changes in its value, potentially subjecting the fund to substantial losses. Additionally, the fund may not be able to take other actions or enter into other transactions to limit or reduce its exposure to the position. Under such circumstances, the fund would remain obligated to meet margin requirements until the position is cleared. As a result, the fund's access to other assets held to cover its futures positions could also be impaired.

Although futures exchanges generally operate similarly in the United States and abroad, foreign futures exchanges may follow trading, settlement and margin procedures that are different than those followed by futures exchanges in the United States. Futures contracts traded outside the United States may not involve a clearing mechanism or related guarantees and may involve greater risk of loss than U.S.-traded contracts, including potentially greater risk of losses due to insolvency of a futures broker, exchange member, or other party that may owe initial or variation margin to the fund. Margin requirements on foreign futures exchanges may be different than those of futures exchanges in the United States, and, because initial and variation margin payments may be measured in foreign currency, a futures contract traded outside the United States may also involve the risk of foreign currency fluctuations.

Swaps – A swap is an agreement pursuant to which two parties agree to exchange the returns, or differential in rates of returns, earned or realized on particular predetermined interest rates, investments or instruments over a predetermined period. The gross returns to be exchanged or 'swapped' between the parties are calculated with respect to a notional amount – for example, the return on or increase in value of a particular dollar amount invested at a particular interest rate. The notional amount of the swap agreement is only used to calculate the amount of the obligations the parties to a swap agreement have agreed to exchange. The fund's obligations or rights under a swap agreement will be equal only to the amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement, and not the notional amount. For exchange-traded swaps, the fund would be under the same obligations to post initial and variation margin as with exchange-traded futures. However, the amount of initial and variation margin is generally set by the exchanges on which the contracts are traded, so the amount of any such margin could be more or less than the amount required for exchange-traded futures. Additionally, for exchange-traded swaps, the fund would be under the same obligations as both exchange-traded options and exchange-traded futures to segregate assets, though the value of assets to be segregated for each instrument type may vary.

Currently the swaps market is largely an over-the-counter market with swap agreements made directly between two counterparties. The fund does not intend to use over-the-counter swaps. However, current government regulation is intended to move a substantial portion of the market for swaps to an exchange-traded swaps market. If, in the judgment of the fund's investment adviser and the subadviser, the exchange-traded swaps market becomes similar in depth and substance to that of the exchange-traded futures market, the subadviser may use exchange-traded swaps to seek to hedge interest rate risk. In such a market the operational aspects and risks of investing in exchange-traded swaps will be substantially similar to those of investing in exchange-traded futures.

Short positions – The fund may take short positions in exchange-traded futures contracts or other investments to attempt to offset potential declines in the value of securities held by the underlying fund. The subadviser selects individual futures contracts on equity indexes of U.S. markets and markets outside the United States that it believes are correlated to the underlying fund's equity exposure. A short position in a futures contract is a transaction in which the fund enters into a futures contract or other investment in anticipation that the market price of that futures contract or other investment will decline due to a decline in the underlying index.

If the price of the futures contract or other investment "sold" short increases between the time the short position in the futures contract is entered and the time the fund closes out its short position in the

futures contract with a corresponding long position in a futures contract for the same underlying index or the futures contract expires, the fund will incur a loss. Since the value of the underlying equity index to a futures contract or other investment could theoretically continually increase the amount of losses are potentially unlimited. If the price of the futures contract or other investment sold declines between the time the short position in the futures contract is entered and the time the fund closes out its short position in the futures contract with a corresponding long position in a futures contract for the same underlying index or the futures contract expires, the fund will realize a gain. The successful use of short positions by the fund may be adversely affected by imperfect correlation between the securities of the underlying fund being hedged and the underlying indexes of the futures contracts.

Cash and cash equivalents – The fund may hold cash or invest in cash equivalents. Cash equivalents include, but are not limited to: (a) commercial paper; (b) short-term bank obligations (for example, certificates of deposit, bankers' acceptances (time drafts on a commercial bank where the bank accepts an irrevocable obligation to pay at maturity)) or bank notes; (c) savings association and savings bank obligations (for example, bank notes and certificates of deposit issued by savings banks or savings associations); (d) securities of the U.S. government, its agencies or instrumentalities that mature, or that may be redeemed, in one year or less; (e) higher quality corporate bonds and notes that mature, or that may be redeemed, in one year or less; and (f) shares of money market funds. The fund may hold shares of money market funds in its cash position that are advised by the fund's investment adviser and/or by an affiliate of the fund's custodian.

There is no limit on the extent to which the fund may take temporary defensive measures. In taking such measures, the fund may fail to achieve its investment objective.

Commercial paper – The fund may purchase commercial paper. Commercial paper refers to short-term promissory notes issued by a corporation to finance its current operations. Such securities normally have maturities of thirteen months or less and, though commercial paper is often unsecured, commercial paper may be supported by letters of credit, surety bonds or other forms of collateral. Maturing commercial paper issuances are usually repaid by the issuer from the proceeds of new commercial paper issuances. As a result, investment in commercial paper is subject to rollover risk, or the risk that the issuer cannot issue enough new commercial paper to satisfy its outstanding commercial paper. Like all fixed income securities, commercial paper prices are susceptible to fluctuations in interest rates. If interest rates rise, commercial paper prices will decline and vice versa. However, the short-term nature of a commercial paper investment makes it less susceptible to volatility than many other fixed income securities because interest rate risk typically increases as maturity lengths increase. Commercial paper tends to yield smaller returns than longer-term corporate debt because securities with shorter maturities typically have lower effective yields than those with longer maturities. As with all fixed income securities, there is a chance that the issuer will default on its commercial paper obligations and commercial paper may become illiquid or suffer from reduced liquidity in these or other situations.

Commercial paper in which the fund may invest includes commercial paper issued in reliance on the exemption from registration afforded by Section 4(a)(2) of the 1933 Act. Section 4(a)(2) commercial paper has substantially the same price and liquidity characteristics as commercial paper generally, except that the resale of Section 4(a)(2) commercial paper is limited to institutional investors who agree that they are purchasing the paper for investment purposes and not with a view to public distribution. Technically, such a restriction on resale renders Section 4(a)(2) commercial paper a restricted security under the 1933 Act. In practice, however, Section 4(a)(2) commercial paper typically can be resold as easily as any other unrestricted security held by the fund. Accordingly, Section 4(a)(2) commercial paper has been generally determined to be liquid under procedures adopted by the fund's board of trustees.

Regulatory considerations – The investment adviser has registered with the Commodity Futures Trading Commission ("CFTC") as a commodity pool operator (CPO). As a CPO, the investment adviser

has adopted certain policies and procedures and implemented certain operational aspects of the fund in order to be in compliance with CFTC rules and regulations. The investment adviser has claimed the relief necessary to take advantage of the CFTC's approach of permitting substituted compliance with SEC rule requirements, which allows the investment adviser to satisfy applicable CFTC rule requirements by complying with certain SEC rule requirements. As a registered CPO, the investment adviser is subject to additional requirements that are not addressed by substituted compliance with SEC rules. Compliance with these additional registration and regulatory requirements may increase the fund's expenses.

Nondiversification – The fund is a nondiversified investment company which allows the fund to invest a greater percentage of its assets in any one issuer than a diversified investment company. The fund intends to comply with the diversification and other requirements of the U.S. Internal Revenue Code of 1986, as amended, applicable to regulated investment companies so that the fund will not be subject to U.S. taxes on the net investment income and net capital gains that it distributes to its shareholders. (See "Taxes and Distributions.")

Cybersecurity risks – With the increased use of technologies such as the Internet to conduct business, the fund and the underlying fund have become potentially more susceptible to operational and information security risks through breaches in cybersecurity. In general, a breach in cybersecurity can result from either a deliberate attack or an unintentional event. Cybersecurity breaches may involve, among other things, infection by computer viruses or other malicious software code or unauthorized access to digital information systems, networks or devices used directly or indirectly by the fund or its service providers through "hacking" or other means, in each case for the purpose of misappropriating assets or sensitive information (including, for example, personal shareholder information), corrupting data or causing operational disruption or failures in the physical infrastructure or operating systems that support the fund. Cybersecurity risks also include the risk of losses of service resulting from external attacks that do not require unauthorized access to a fund's systems, networks or devices. For example, denial-of-service attacks on the investment adviser's or an affiliate's website could effectively render a fund's network services unavailable to fund shareholders and other intended end-users. Any such cybersecurity breaches or losses of service may cause a fund to lose proprietary information, suffer data corruption or lose operational capacity or may result in unauthorized release or other misuse of confidential information. These, in turn, could cause the fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. While the fund, the underlying fund and their investment adviser have established business continuity plans and risk management systems designed to prevent or reduce the impact of cybersecurity attacks, there are inherent limitations in such plans and systems due in part to the ever-changing nature of technology and cybersecurity attack tactics, and there is a possibility that certain risks have not been adequately identified or prepared for.

In addition, cybersecurity failures by or breaches of the fund's or the underlying fund's third-party service providers (including, but not limited to, a fund's investment adviser, subadviser, transfer agent, custodian, administrators and other financial intermediaries, as applicable) may disrupt the business operations of the service providers and of the fund, potentially resulting in financial losses, the inability of fund shareholders to transact business with the fund and of the fund to process transactions, the inability of the fund to calculate its net asset value, violations of applicable privacy and other laws, rules and regulations, regulatory fines, penalties, reputational damage, reimbursement or other compensatory costs and/or additional compliance costs associated with implementation of any corrective measures. The fund, the underlying fund and their respective shareholders could be negatively impacted as a result of any such cybersecurity breaches, and there can be no assurance that a fund will not suffer losses relating to cybersecurity attacks or other informational security breaches affecting the fund's third-party service providers in the future, particularly as a fund cannot control any cybersecurity plans or systems implemented by such service providers.

Cybersecurity risks may also impact issuers of securities in which the underlying fund invests, which may cause the underlying fund's investments in such issuers to lose value.

The underlying funds

The following descriptions of securities and techniques apply to the Growth Fund, the International Fund, Washington Mutual Investors Fund, the Growth-Income Fund, The Bond Fund of America, the Government Fund and/or the Asset Allocation Fund (collectively, the "underlying funds"). Except where the context indicates otherwise, all references herein to the "underlying fund" apply to each of the underlying funds. However, because the following is a combined summary of investment strategies of all of the underlying funds, certain matters described herein will only apply to a fund to the extent such fund is invested in an underlying fund that engages in such a strategy.

Market conditions - The value of, and the income generated by, the securities in which the underlying fund invests may decline, sometimes rapidly or unpredictably, due to factors affecting certain issuers, particular industries or sectors, or the overall markets. Rapid or unexpected changes in market conditions could cause the underlying fund to liquidate its holdings at inopportune times or at a loss or depressed value. The value of a particular holding may decrease due to developments related to that issuer, but also due to general market conditions, including real or perceived economic developments such as changes in interest rates, credit quality, inflation, or currency rates, or generally adverse investor sentiment. The value of a holding may also decline due to factors that negatively affect a particular industry or sector, such as labor shortages, increased production costs, or competitive conditions.

Global economies and financial markets are highly interconnected, and conditions and events in one country, region or financial market may adversely impact issuers in a different country, region or financial market. Furthermore, local, regional and global events such as war, acts of terrorism, social unrest, natural disasters, the spread of infectious illness or other public health threats could also adversely impact issuers, markets and economies, including in ways that cannot necessarily be foreseen. The underlying fund could be negatively impacted if the value of a portfolio holding were harmed by such conditions or events.

Significant market disruptions, such as those caused by pandemics, natural or environmental disasters, war, acts of terrorism, or other events, can adversely affect local and global markets and normal market operations. Market disruptions may exacerbate political, social, and economic risks. Additionally, market disruptions may result in increased market volatility; regulatory trading halts; closure of domestic or foreign exchanges, markets, or governments; or market participants operating pursuant to business continuity plans for indeterminate periods of time. Such events can be highly disruptive to economies and markets and significantly impact individual companies, sectors, industries, markets, currencies, interest and inflation rates, credit ratings, investor sentiment, and other factors affecting the value of the fund's investments and operation of the fund. These events could disrupt businesses that are integral to the fund's operations or impair the ability of employees of fund service providers to perform essential tasks on behalf of the fund.

Governmental and quasi-governmental authorities may take a number of actions designed to support local and global economies and the financial markets in response to economic disruptions. Such actions may include a variety of significant fiscal and monetary policy changes, including, for example, direct capital infusions into companies, new monetary programs and significantly lower interest rates. These actions may result in significant expansion of public debt and may result in greater market risk. Additionally, an unexpected or quick reversal of these policies, or the ineffectiveness of these policies, could negatively impact overall investor sentiment and further increase volatility in securities markets.

Equity securities – The underlying fund may invest in equity securities. Equity securities represent an ownership position in a company. Equity securities held by the underlying fund typically consist of common stocks. The prices of equity securities fluctuate based on, among other things, events specific to their issuers and market, economic and other conditions. For example, prices of these securities can be affected by financial contracts held by the issuer or third parties (such as derivatives) relating to the security or other assets or indices. Holders of equity securities are not creditors of the issuer. If an issuer liquidates, holders of equity securities are entitled to their pro rata share of the issuer's assets, if any, after creditors (including the holders of fixed income securities and senior equity securities) are paid.

There may be little trading in the secondary market for particular equity securities, which may adversely affect the underlying fund's ability to value accurately or dispose of such equity securities. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the value and/or liquidity of equity securities.

The growth-oriented, equity-type securities generally purchased by the underlying fund may involve large price swings and potential for loss. To the extent the underlying fund invests in income-oriented, equity-type securities, income provided by the underlying fund may be reduced by changes in the dividend policies of, and the capital resources available at, the companies in which the underlying fund invests.

Debt instruments – Debt securities, also known as "fixed income securities," are used by issuers to borrow money. Bonds, notes, debentures, asset-backed securities (including those backed by mortgages), and loan participations and assignments are common types of debt securities. Generally, issuers pay investors periodic interest and repay the amount borrowed either periodically during the life of the security and/or at maturity. Some debt securities, such as zero coupon bonds, do not pay current interest, but are purchased at a discount from their face values and their values accrete over time to face value at maturity. Some debt securities bear interest at rates that are not fixed, but that vary with changes in specified market rates or indices. The market prices of debt securities fluctuate depending on such factors as interest rates, credit quality and maturity. In general, market prices of debt securities decline when interest rates rise and increase when interest rates fall. These fluctuations will generally be greater for longer-term debt securities than for shorter-term debt securities. Prices of these securities can also be affected by financial contracts held by the issuer or third parties (such as derivatives) relating to the security or other assets or indices. Borrowers that are in bankruptcy or restructuring may never pay off their indebtedness, or they may pay only a small fraction of the amount owed. Direct indebtedness of countries, particularly developing countries, also involves a risk that the governmental entities responsible for the repayment of the debt may be unable, or unwilling, to pay interest and repay principal when due.

Lower rated debt securities, rated Ba1/BB+ or below by Nationally Recognized Statistical Rating Organizations, are described by the rating agencies as speculative and involve greater risk of default or price changes due to changes in the issuer's creditworthiness than higher rated debt securities, or they may already be in default. Such securities are sometimes referred to as "junk bonds" or high yield bonds. The market prices of these securities may fluctuate more than higher quality securities and may decline significantly in periods of general economic difficulty. It may be more difficult to dispose of, and to determine the value of, lower rated debt securities. Investment grade bonds in the ratings categories A or Baa/BBB also may be more susceptible to changes in market or economic conditions than bonds rated in the highest rating categories.

Certain additional risk factors relating to debt securities are discussed below:

Sensitivity to interest rate and economic changes – Debt securities may be sensitive to economic changes, political and corporate developments, and interest rate changes. In

addition, during an economic downturn or a period of rising interest rates, issuers that are highly leveraged may experience increased financial stress that could adversely affect their ability to meet projected business goals, to obtain additional financing and to service their principal and interest payment obligations. Periods of economic change and uncertainty also can be expected to result in increased volatility of market prices and yields of certain debt securities and derivative instruments. As discussed under "Market conditions" above in this statement of additional information, governments and quasi-governmental authorities may take actions to support local and global economies and financial markets during periods of economic crisis, including direct capital infusions into companies, new monetary programs and significantly lower interest rates. Such actions may expose fixed income markets to heightened volatility and may reduce liquidity for certain investments, which could cause the value of the underlying fund's portfolio to decline.

Payment expectations – Debt securities may contain redemption or call provisions. If an issuer exercises these provisions in a lower interest rate market, the underlying fund may have to replace the security with a lower yielding security, resulting in decreased income to investors. If the issuer of a debt security defaults on its obligations to pay interest or principal or is the subject of bankruptcy proceedings, the underlying fund may incur losses or expenses in seeking recovery of amounts owed to it.

Liquidity and valuation – There may be little trading in the secondary market for particular debt securities, which may affect adversely the underlying fund's ability to value accurately or dispose of such debt securities. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the value and/or liquidity of debt securities.

The investment adviser attempts to reduce the risks described above through diversification of the underlying fund's portfolio and by credit analysis of each issuer, as well as by monitoring broad economic trends and corporate and legislative developments, but there can be no assurance that it will be successful in doing so.

Credit ratings for debt securities provided by rating agencies reflect an evaluation of the safety of principal and interest payments, not market value risk. The rating of an issuer is a rating agency's view of past and future potential developments related to the issuer and may not necessarily reflect actual outcomes. There can be a lag between the time of developments relating to an issuer and the time a rating is assigned and updated. The investment adviser considers these ratings of securities as one of many criteria in making its investment decisions.

Bond rating agencies may assign modifiers (such as +/-) to ratings categories to signify the relative position of a credit within the rating category. Investment policies that are based on ratings categories should be read to include any security within that category, without giving consideration to the modifier except where otherwise provided. See the Appendix to this statement of additional information for more information about credit ratings.

Securities with equity and debt characteristics – Certain securities have a combination of equity and debt characteristics. Such securities may at times behave more like equity than debt or vice versa.

Preferred stock – Preferred stock represents an equity interest in an issuer that generally entitles the holder to receive, in preference to common stockholders and the holders of certain other stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the issuer. Preferred stocks may pay fixed or adjustable rates of return, and preferred stock dividends may be cumulative or non-cumulative and participating or non-participating. Cumulative dividend provisions require all or a portion of prior unpaid dividends to be paid before dividends can be paid to the issuer's common stockholders, while prior unpaid dividends on non-cumulative preferred stock are forfeited. Participating preferred stock may be entitled to a dividend exceeding the issuer's declared dividend in certain cases, while non-participating preferred stock is entitled only to the stipulated dividend. Preferred stock is subject to issuer-specific and market risks applicable generally to equity securities. As with debt securities, the prices and yields of preferred stocks often move with changes in interest rates and the issuer's credit quality. Additionally, a company's preferred stock typically pays dividends only after the company makes required payments to holders of its bonds and other debt. Accordingly, the price of preferred stock will usually react more strongly than bonds and other debt to actual or perceived changes in the issuing company's financial condition or prospects. Preferred stock of smaller companies may be more vulnerable to adverse developments than preferred stock of larger companies.

Convertible securities – A convertible security is a debt obligation, preferred stock or other security that may be converted, within a specified period of time and at a stated conversion rate, into common stock or other equity securities of the same or a different issuer. The conversion may occur automatically upon the occurrence of a predetermined event or at the option of either the issuer or the security holder. Under certain circumstances, a convertible security may also be called for redemption or conversion by the issuer after a particular date and at predetermined price specified upon issue. If a convertible security held by an underlying fund is called for redemption or conversion, the fund could be required to tender the security for redemption, convert it into the underlying common stock, or sell it to a third party.

The holder of a convertible security is generally entitled to participate in the capital appreciation resulting from a market price increase in the issuer's common stock and to receive interest paid or accrued until the convertible security matures or is redeemed, converted or exchanged. Before conversion, convertible securities have characteristics similar to non-convertible debt or preferred securities, as applicable. Convertible securities rank senior to common stock in an issuer's capital structure and, therefore, normally entail less risk than the issuer's common stock. However, convertible securities may also be subordinate to any senior debt obligations of the issuer, and, therefore, an issuer's convertible securities may entail more risk than such senior debt obligations. Convertible securities usually offer lower interest or dividend yields than non-convertible debt securities of similar credit quality because of the potential for capital appreciation. In addition, convertible securities are often lower-rated securities.

Because of the conversion feature, the price of a convertible security will normally fluctuate in some proportion to changes in the price of the underlying asset, and, accordingly, convertible securities are subject to risks relating to the activities of the issuer and/or general market and economic conditions. The income component of a convertible security may cushion the security against declines in the price of the underlying asset but may also cause the price of the security to fluctuate based upon changes in interest rates and the credit quality of the issuer. As with a straight fixed income security, the price of a convertible security tends to increase when interest rates decline and decrease when interest rates rise. Like the price of a common

stock, the price of a convertible security also tends to increase as the price of the underlying stock rises and to decrease as the price of the underlying stock declines.

Hybrid securities – A hybrid security is a type of security that also has equity and debt characteristics. Like equities, which have no final maturity, a hybrid security may be perpetual. On the other hand, like debt securities, a hybrid security may be callable at the option of the issuer on a date specified at issue. Additionally, like common equities, which may stop paying dividends at virtually any time without violating any contractual terms or conditions, hybrids typically allow for issuers to withhold payment of interest until a later date or to suspend coupon payments entirely without triggering an event of default. Hybrid securities are normally at the bottom of an issuer's debt capital structure because holders of an issuer's hybrid securities are structurally subordinated to the issuer's senior creditors. In bankruptcy, hybrid security holders should only get paid after all senior creditors of the issuer have been paid but before any disbursements are made to the issuer's equity holders. Accordingly, hybrid securities may be more sensitive to economic changes than more senior debt securities. Such securities may also be viewed as more equity-like by the market when the issuer or its parent company experiences financial difficulties.

Contingent convertible securities, which are also known as contingent capital securities, are a form of hybrid security that are intended to either convert into equity or have their principal written down upon the occurrence of certain trigger events. One type of contingent convertible security has characteristics designed to absorb losses, by providing that the liquidation value of the security may be adjusted downward to below the original par value or written off entirely under certain circumstances. For instance, if losses have eroded the issuer's capital level below a specified threshold, the liquidation value of the security may be reduced in whole or in part. The write-down of the security's par value may occur automatically and would not entitle holders to institute bankruptcy proceedings against the issuer. In addition, an automatic write-down could result in a reduced income rate if the dividend or interest payment associated with the security is based on the security's par value. Such securities may, but are not required to, provide for circumstances under which the liquidation value of the security may be adjusted back up to par, such as an improvement in capitalization or earnings. Another type of contingent convertible security provides for mandatory conversion of the security into common shares of the issuer under certain circumstances. The mandatory conversion might relate, for example, to the issuer's failure to maintain a capital minimum. Since the common stock of the issuer may not pay a dividend, investors in such instruments could experience reduced yields (or no yields at all) and conversion would deepen the subordination of the investor, effectively worsening the investor's standing in the case of the issuer's insolvency. An automatic write-down or conversion event with respect to a contingent convertible security will typically be triggered by a reduction in the issuer's capital level, but may also be triggered by regulatory actions, such as a change in regulatory capital requirements, or by other factors.

Investing in smaller capitalization stocks – The underlying fund may invest in the stocks of smaller capitalization companies. Investing in smaller capitalization stocks can involve greater risk than is customarily associated with investing in stocks of larger, more established companies. For example, smaller companies often have limited product lines, limited operating histories, limited markets or financial resources, may be dependent on one or a few key persons for management and can be more susceptible to losses. Also, their securities may be less liquid or illiquid (and therefore have to be sold at a discount from current prices or sold in small lots over an extended period of time), may be followed by fewer investment research analysts and may be subject to wider price swings, thus creating a greater chance of loss than securities of larger capitalization companies. The underlying fund determines relative market capitalizations using U.S. standards. Accordingly, the underlying fund's investments in certain countries outside the United States may have larger market capitalizations relative to other companies within those countries.

Investing in private companies – The underlying fund may invest in companies that have not publicly offered their securities. Investing in private companies can involve greater risks than those associated with investing in publicly traded companies. For example, the securities of a private company may be subject to the risk that market conditions, developments within the company, investor perception, or regulatory decisions may delay or prevent the company from ultimately offering its securities to the public. Furthermore, these investments are generally considered to be illiquid until a company's public offering and are often subject to additional contractual restrictions on resale that would prevent the underlying fund from selling its company shares for a period of time following the public offering.

Investments in private companies can offer the underlying fund significant growth opportunities at attractive prices. However, these investments can pose greater risk, and, consequently, there is no guarantee that positive results can be achieved in the future.

Investing outside the U.S. – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers are domiciled, operate or generate revenue. These issuers may also be more susceptible to actions of foreign governments such as the imposition of price controls or punitive taxes that could adversely impact the value of these securities. To the extent the underlying fund invests in securities that are denominated in currencies other than the U.S. dollar, these securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Securities markets in certain countries may be more volatile or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the underlying fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Additional costs could be incurred in connection with the underlying fund's investment activities outside the United States. Brokerage commissions may be higher outside the United States, and the underlying fund will bear certain expenses in connection with its currency transactions. Furthermore, increased custodian costs may be associated with maintaining assets in certain jurisdictions.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the underlying fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the underlying fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

In countries where direct foreign investment is limited or prohibited, the underlying fund may invest in operating companies based in such countries through an offshore intermediary entity that, based on contractual agreements, seeks to replicate the rights and obligations of direct equity ownership in such operating business. Because the contractual arrangements do not in fact bestow the underlying fund with actual equity ownership in the operating company, these investment structures may limit the underlying fund's rights as an investor and create significant additional risks. For example, local government authorities may determine that such structures do not comply with applicable laws and regulations, including those relating to restrictions on foreign ownership. In such event, the intermediary entity and/or the operating business may be subject to penalties, revocation of business and operating licenses or forfeiture of foreign ownership interests, and the underlying fund's economic interests in the underlying operating business and its rights as an investor may not be recognized, resulting in a loss to the underlying fund and its shareholders. In addition, exerting control through contractual arrangements may be less effective than direct equity ownership, and a company may incur substantial costs to enforce the terms of such arrangements, including those relating to the distribution of the underlying funds among the entities. These special investment structures may also be disregarded for tax purposes by local tax authorities, resulting in increased tax liabilities, and the underlying fund's control over - and distributions due from - such structures may be jeopardized if the individuals who hold the equity interest in such structures breach the terms of the agreements. While these structures may be widely used to circumvent limits on foreign ownership in certain jurisdictions, there is no assurance that they will be upheld by local regulatory authorities or that disputes regarding the same will be resolved consistently.

Although there is no universally accepted definition, the investment adviser generally considers an emerging market to be a market that is in the earlier stages of its industrialization cycle with a low per capita gross domestic product ("GDP") and a low market capitalization to GDP ratio relative to those in the United States and the European Union, and would include markets commonly referred to as "frontier markets."

Certain risk factors related to emerging markets

Currency fluctuations – Certain emerging markets' currencies have experienced and in the future may experience significant declines against the U.S. dollar. For example, if the U.S. dollar appreciates against foreign currencies, the value of the underlying fund's emerging markets securities holdings would generally depreciate and vice versa. Further, the fund may lose money due to losses and other expenses incurred in converting various currencies to purchase and sell securities valued in currencies other than the U.S. dollar, as well as from currency restrictions, exchange control regulation and currency devaluations.

Government regulation – Certain developing countries lack uniform accounting, auditing and financial reporting and disclosure standards, have less governmental supervision of financial markets than in the United States, and do not honor legal rights or protections enjoyed by investors in the United States. Certain governments may be more unstable and present greater risks of nationalization or restrictions on foreign ownership of local companies. Repatriation of investment income, capital and the proceeds of sales by foreign investors may require governmental registration and/or approval in some developing countries. While the underlying fund will only invest in markets where these restrictions are considered acceptable by the investment adviser, a country could impose new or additional repatriation restrictions after the underlying fund's investment. If this happened, the underlying fund's response might include, among other things, applying to the appropriate authorities for a waiver of the restrictions or engaging in transactions in other markets designed to offset the risks of decline in that country. Such restrictions will be considered in relation to the underlying fund's liquidity needs and other factors. Further, some attractive equity securities may not be available to the underlying fund if foreign shareholders already hold the maximum amount legally permissible.

While government involvement in the private sector varies in degree among developing countries, such involvement may in some cases include government ownership of companies in certain sectors, wage and price controls or imposition of trade barriers and other protectionist measures. With respect to any developing country, there is no guarantee that some future economic or political crisis will not lead to price controls, forced mergers of companies, expropriation, or creation of government monopolies to the possible detriment of the underlying fund's investments.

Fluctuations in inflation rates – Rapid fluctuations in inflation rates may have negative impacts on the economies and securities markets of certain emerging market countries.

Less developed securities markets – Emerging markets may be less well-developed and regulated than other markets. These markets have lower trading volumes than the securities markets of more developed countries and may be unable to respond effectively to increases in trading volume. Consequently, these markets may be substantially less liquid than those of more developed countries, and the securities of issuers located in these markets may have limited marketability. These factors may make prompt liquidation of substantial portfolio holdings difficult or impossible at times.

Settlement risks – Settlement systems in developing countries are generally less well organized than those of developed markets. Supervisory authorities may also be unable to apply standards comparable to those in developed markets. Thus, there may be risks that settlement may be delayed and that cash or securities belonging to the underlying fund may be in jeopardy because of failures of or defects in the systems. In particular, market practice may require that payment be made before receipt of the security being purchased or that delivery of a security be made before payment is received. In such cases, default by a broker or bank (the "counterparty") through whom the transaction is effected might cause the underlying fund to suffer a loss. The underlying fund will seek, where possible, to use counterparties whose financial status is such that this risk is reduced. However, there can be no certainty that the underlying fund will be successful in eliminating this risk, particularly as counterparties operating in developing countries frequently lack the standing or financial resources of those in developed countries. There may also be a danger that, because of uncertainties in the operation of settlement systems in individual markets, competing claims may arise with respect to securities held by or to be transferred to the underlying fund.

Limited market information – The underlying fund may encounter problems assessing investment opportunities in certain emerging markets in light of limitations on available information and different accounting, auditing and financial reporting standards. For example, due to jurisdictional limitations, the Public Company Accounting Oversight Board ("PCAOB") may be unable to inspect the audit work and practices of PCAOB-registered auditing firms in certain developing countries that audit U.S. reporting companies with operations in those countries. As a result, there is greater risk that financial records and information relating to an issuer's operations in developing countries will be incomplete or misleading, which may negatively impact the fund's investments in such company. When faced with limited market information, the underlying fund's investment adviser will seek alternative sources of information, and to the extent the investment adviser is not satisfied with the sufficiency or accuracy of the information obtained with respect to a particular market or security, the underlying fund will not invest in such market or security.

Taxation – Taxation of dividends, interest and capital gains received by the underlying fund varies among developing countries and, in some cases, is comparatively high. In addition, developing countries typically have less well-defined tax laws and procedures and such laws may permit retroactive taxation so that the underlying fund could become subject in the future

to local tax liability that it had not reasonably anticipated in conducting its investment activities or valuing its assets.

Fraudulent securities – Securities purchased by the underlying fund may subsequently be found to be fraudulent or counterfeit, resulting in a loss to the underlying fund.

Remedies – Developing countries may offer less protection to investors than U.S. markets and, in the event of investor harm, there may be substantially less recourse available to the underlying fund and its shareholders. In addition, as a matter of law or practicality, the underlying fund and its shareholders - as well as U.S. regulators - may encounter substantial difficulties in obtaining and enforcing judgments and other actions against non-U.S. individuals and companies.

Investing through Stock Connect – The underlying fund may invest in China A-shares of certain Chinese companies listed and traded on the Shanghai Stock Exchange and on the Shenzhen Stock Exchange (together, the “Exchanges”) through the Shanghai-Hong Kong Stock Connect Program and the Shenzhen-Hong Kong Stock Connect Program, respectively (together, “Stock Connect”). Stock Connect is a securities trading and clearing program developed by the Exchange of Hong Kong, the Exchanges and the China Securities Depository and Clearing Corporation Limited. Stock Connect facilitates foreign investment in the People’s Republic of China (“PRC”) via brokers in Hong Kong. Persons investing through Stock Connect are subject to PRC regulations and Exchange listing rules, among others. These could include limitations on or suspension of trading. These regulations are relatively new and subject to changes which could adversely impact the underlying fund’s rights with respect to the securities. For example, a stock may be recalled from the scope of eligible SSE Securities or SZSE Securities for trading via Stock Connect for various reasons, and in such event the stock can only be sold but is restricted from being bought. In such event, the investment adviser’s ability to implement the underlying fund’s investment strategies may be adversely affected. As Stock Connect is still relatively new, investments made through Stock Connect are subject to relatively untested trading, clearance and settlement procedures and there are no assurances that the necessary systems to run the program will function properly. In addition, Stock Connect is subject to aggregate and daily quota limitations on purchases and permitted price fluctuations. As a result, the underlying fund may experience delays in transacting via Stock Connect and there can be no assurance that a liquid market on the Exchanges will exist. Since Stock Connect only operates on days when both the Chinese and Hong Kong markets are open for trading, and banking services are available in both markets on the corresponding settlement days, the underlying fund’s ownership interest in securities traded through Stock Connect may not be reflected directly and the underlying fund may be subject to the risk of price fluctuations in China A-shares when Stock Connect is not open to trading. Changes in Chinese tax rules may also adversely affect the underlying fund’s performance. The underlying fund’s shares are held in an omnibus account and registered in nominee name. Please also see the sections on risks relating to investing outside the U.S. and investing in emerging markets.

Investing through Bond Connect – The underlying fund may invest in onshore China bonds via Bond Connect, the opening up of China’s Interbank Bond Market (CIBM) to global investors through the China-Hong Kong mutual access program. The program allows foreign and Mainland China investors the ability to trade in each other’s bond market through a connection between the Mainland and Hong Kong based financial infrastructure institutions. Bond Connect aims to enhance the efficiency and flexibility of investing in the China Interbank Bond Market. This is accomplished by easing the access requirements to enter the market and using the Hong Kong trading infrastructure to connect to China Foreign Exchange Trading System (CFETS). Market volatility and potential lack of liquidity due to low trading volume of certain debt securities in CIBM may result in prices of certain debt securities traded on such market fluctuating significantly. The bid and offer spreads of the prices of such securities may be large, and the underlying fund may therefore incur significant trading, settlement and realization costs and may face counterparty default, liquidity, and volatility risks, resulting in significant losses for the underlying funds and their investors. Bond Connect is a novel concept and, as such, the current

regulations are untested and there is no certainty as to how they will be applied. In addition, the current regulations are subject to change which may have potential retrospective effects and there can be no assurance that Bond Connect will not be abolished. New regulations may be issued from time to time by the regulators in the PRC and Hong Kong in connection with operations, legal enforcement and cross-border trades under Bond Connect. The underlying fund may be adversely affected as a result of such changes.

Currency transactions – The underlying fund may enter into currency transactions on a spot (i.e., cash) basis at the prevailing rate in the currency exchange market to provide for the purchase or sale of a currency needed to purchase a security denominated in such currency. In addition, the underlying fund may enter into forward currency contracts to protect against changes in currency exchange rates, to increase exposure to a particular foreign currency, to shift exposure to currency fluctuations from one currency to another or to seek to increase returns. A forward currency contract is an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. Some forward currency contracts, called non-deliverable forwards or NDFs, do not call for physical delivery of the currency and are instead settled through cash payments. Forward currency contracts are typically privately negotiated and traded in the interbank market between large commercial banks (or other currency traders) and their customers. Although forward contracts entered into by the underlying fund will typically involve the purchase or sale of a currency against the U.S. dollar, the underlying fund also may purchase or sell a non-U.S. currency against another non-U.S. currency.

Currency exchange rates generally are determined by forces of supply and demand in the foreign exchange markets and the relative merits of investment in different countries as viewed from an international perspective. Currency exchange rates, as well as foreign currency transactions, can also be affected unpredictably by intervention by U.S. or foreign governments or central banks or by currency controls or political developments in the United States or abroad. Such intervention or other events could prevent the underlying fund from entering into foreign currency transactions, force the underlying fund to exit such transactions at an unfavorable time or price or result in penalties to the underlying fund, any of which may result in losses to the underlying fund.

Generally, the underlying fund will not attempt to protect against all potential changes in exchange rates and the use of forward contracts does not eliminate the risk of fluctuations in the prices of the underlying securities. If the value of the underlying securities declines or the amount of the underlying fund's commitment increases because of changes in exchange rates, the underlying fund may need to provide additional cash or securities to satisfy its commitment under the forward contract. The underlying fund is also subject to the risk that it may be delayed or prevented from obtaining payments owed to it under the forward contract as a result of the insolvency or bankruptcy of the counterparty with which it entered into the forward contract or the failure of the counterparty to comply with the terms of the contract.

The realization of gains or losses on foreign currency transactions will usually be a function of the investment adviser's ability to accurately estimate currency market movements. Entering into forward currency transactions may change the underlying fund's exposure to currency exchange rates and could result in losses to the underlying fund if currencies do not perform as expected by the underlying fund's investment adviser. For example, if the underlying fund's investment adviser increases a fund's exposure to a foreign currency using forward contracts and that foreign currency's value declines, that fund may incur a loss. In addition, while entering into forward currency transactions could minimize the risk of loss due to a decline in the value of the hedged currency, it could also limit any potential gain that may result from an increase in the value of the currency. See also the "Derivatives" section under "Description of certain securities, investment techniques and risks" for a general description of investment techniques and risks relating to derivatives, including certain currency forwards.

Forward currency contracts may give rise to leverage, or exposure to potential gains and losses in excess of the initial amount invested. Leverage magnifies gains and losses and could cause the fund or the underlying fund to be subject to more volatility than if it had not been leveraged, thereby resulting in a heightened risk of loss. The underlying fund will segregate liquid assets that will be marked to market daily to meet their forward contract commitments to the extent required by the U.S. Securities and Exchange Commission.

Forward currency transactions also may affect the character and timing of income, gain, or loss recognized by the fund or an underlying fund for U.S. tax purposes. The use of forward currency contracts could result in the application of the mark-to-market provisions of the Internal Revenue Code and may cause an increase (or decrease) in the amount of taxable dividends paid by the fund or an underlying fund.

Indirect exposure to cryptocurrencies - Although the underlying fund has no current intention of directly investing in cryptocurrencies, some issuers have begun to accept cryptocurrency for payment of services, use cryptocurrencies as reserve assets or invest in cryptocurrencies, and the underlying fund may invest in securities of such issuers. The underlying fund may also invest in securities of issuers which provide cryptocurrency-related services. Cryptocurrencies, which are an emerging asset class, are digital assets designed to act as a medium of exchange. There are thousands of cryptocurrencies, including bitcoin.

Cryptocurrencies are subject to fluctuations in value. Cryptocurrencies are not backed by any government, corporation, or other identified body. Rather, the value of a cryptocurrency is determined by the supply and demand for such cryptocurrency in the global market for the trading of cryptocurrency. Such trading market is unregulated and may be more exposed to operational or technical issues as well as fraud or manipulation in comparison to established, regulated exchanges for securities, derivatives and traditional currencies. The value of a cryptocurrency may decline precipitously (including to zero) for a variety of reasons, including, but not limited to, regulatory changes, a loss of confidence in its network or a change in user preference to other cryptocurrencies. An issuer that owns cryptocurrencies may experience custody issues, and may lose its cryptocurrency holdings through theft, hacking, and technical glitches in the applicable blockchain. The underlying fund may experience losses as a result of its ownership of the decline in value of issuers that own cryptocurrencies or which provide cryptocurrency-related services. If an issuer that owns cryptocurrencies intends to pay a dividend using such holdings or to otherwise make a distribution of such holdings to its stockholders, such dividends or distributions may face regulatory, operational and technical issues.

Factors affecting the further development of cryptocurrency include, but are not limited to: continued worldwide growth of, or possible cessation of or reversal in, the adoption and use of cryptocurrencies and other digital assets; the developing regulatory environment relating to cryptocurrencies, including the characterization of cryptocurrencies as currencies, commodities, or securities, the tax treatment of cryptocurrencies, and government and quasi-government regulation or restrictions on, or regulation of access to and operation of, cryptocurrency networks and the exchanges on which cryptocurrencies trade, including anti-money laundering regulations and requirements; changes in consumer demographics and public preferences; general economic conditions; maintenance and development of open-source software protocols; the availability and popularity of other forms or methods of buying and selling goods and services; the use of the networks supporting digital assets, such as those for developing smart contracts and distributed applications; and general risks tied to the use of information technologies, including cyber risks. A hack or failure of one cryptocurrency may lead to a loss in confidence in, and thus decreased usage or and or value of, other cryptocurrencies.

Forward commitment, when issued and delayed delivery transactions – The underlying fund may enter into commitments to purchase or sell securities at a future date. When the underlying fund agrees to purchase such securities, it assumes the risk of any decline in value of the security from the

date of the agreement. If the other party to such a transaction fails to deliver or pay for the securities, the underlying fund could miss a favorable price or yield opportunity, or could experience a loss.

The underlying fund may enter into roll transactions, such as a mortgage dollar roll where the underlying fund sells mortgage-backed securities for delivery in the current month and simultaneously contracts to repurchase substantially similar (same type, coupon, and maturity) securities on a specified future date, at a pre-determined price. During the period between the sale and repurchase (the “roll period”), the underlying fund forgoes principal and interest paid on the mortgage-backed securities. The underlying fund is compensated by the difference between the current sales price and the lower forward price for the future purchase (often referred to as the “drop”), if any, as well as by the interest earned on the cash proceeds of the initial sale. The underlying fund could suffer a loss if the contracting party fails to perform the future transaction and the underlying fund is therefore unable to buy back the mortgage-backed securities it initially sold. The underlying fund also takes the risk that the mortgage-backed securities that it repurchases at a later date will have less favorable market characteristics than the securities originally sold (e.g., greater prepayment risk). These transactions are accounted for as purchase and sale transactions, which increase the underlying fund’s portfolio turnover rate.

With to be announced (TBA) transactions, the particular securities (i.e., specified mortgage pools) to be delivered or received are not identified at the trade date, but are “to be announced” at a later settlement date. However, securities to be delivered must meet specified criteria, including face value, coupon rate and maturity, and be within industry-accepted “good delivery” standards.

The underlying fund will not use any of these transactions for the purpose of leveraging and will segregate liquid assets that will be marked to market daily in an amount sufficient to meet their payment obligations in these transactions. Although these transactions will not be entered into for leveraging purposes, to the extent the underlying fund’s aggregate commitments in connection with these transactions exceed its segregated assets, the underlying fund temporarily could be in a leveraged position (because it may have an amount greater than its net assets subject to market risk). Should market values of the underlying fund’s portfolio securities decline while the underlying fund is in a leveraged position, greater depreciation of its net assets would likely occur than if it were not in such a position. The underlying fund will not borrow money to settle these transactions and, therefore, will liquidate other portfolio securities in advance of settlement if necessary to generate additional cash to meet their obligations. After a transaction is entered into, the underlying fund may still dispose of or renegotiate the transaction. Additionally, prior to receiving delivery of securities as part of a transaction, the underlying fund may sell such securities.

Obligations backed by the “full faith and credit” of the U.S. government – U.S. government obligations include the following types of securities:

U.S. Treasury securities – U.S. Treasury securities include direct obligations of the U.S. Treasury, such as Treasury bills, notes and bonds. For these securities, the payment of principal and interest is unconditionally guaranteed by the U.S. government, and thus they are of high credit quality. Such securities are subject to variations in market value due to fluctuations in interest rates and in government policies, but, if held to maturity, are expected to be paid in full (either at maturity or thereafter).

Federal agency securities – The securities of certain U.S. government agencies and government-sponsored entities are guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government. Such agencies and entities include, but are not limited to, the Federal Financing Bank (“FFB”), the Government National Mortgage Association (“Ginnie Mae”), the Veterans Administration (“VA”), the Federal Housing Administration (“FHA”), the Export-Import Bank (“Exim Bank”), the Overseas Private Investment

Corporation ("OPIC"), the Commodity Credit Corporation ("CCC") and the Small Business Administration ("SBA").

Other federal agency obligations – Additional federal agency securities are neither direct obligations of, nor guaranteed by, the U.S. government. These obligations include securities issued by certain U.S. government agencies and government-sponsored entities. However, they generally involve some form of federal sponsorship: some operate under a congressional charter; some are backed by collateral consisting of "full faith and credit" obligations as described above; some are supported by the issuer's right to borrow from the Treasury; and others are supported only by the credit of the issuing government agency or entity. These agencies and entities include, but are not limited to: the Federal Home Loan Banks, the Federal Home Loan Mortgage Corporation ("Freddie Mac"), the Federal National Mortgage Association ("Fannie Mae"), the Tennessee Valley Authority and the Federal Farm Credit Bank System.

In 2008, Freddie Mac and Fannie Mae were placed into conservatorship by their new regulator, the Federal Housing Finance Agency ("FHFA"). Simultaneously, the U.S. Treasury made a commitment of indefinite duration to maintain the positive net worth of both firms. As conservator, the FHFA has the authority to repudiate any contract either firm has entered into prior to the FHFA's appointment as conservator (or receiver should either firm go into default) if the FHFA, in its sole discretion determines that performance of the contract is burdensome and repudiation would promote the orderly administration of Fannie Mae's or Freddie Mac's affairs. While the FHFA has indicated that it does not intend to repudiate the guaranty obligations of either entity, doing so could adversely affect holders of their mortgage-backed securities. For example, if a contract were repudiated, the liability for any direct compensatory damages would accrue to the entity's conservatorship estate and could only be satisfied to the extent the estate had available assets. As a result, if interest payments on Fannie Mae or Freddie Mac mortgage-backed securities held by the underlying fund were reduced because underlying borrowers failed to make payments or such payments were not advanced by a loan servicer, the underlying fund's only recourse might be against the conservatorship estate, which might not have sufficient assets to offset any shortfalls.

The FHFA, in its capacity as conservator, has the power to transfer or sell any asset or liability of Fannie Mae or Freddie Mac. The FHFA has indicated it has no current intention to do this; however, should it do so a holder of a Fannie Mae or Freddie Mac mortgage-backed security would have to rely on another party for satisfaction of the guaranty obligations and would be exposed to the credit risk of that party.

Certain rights provided to holders of mortgage-backed securities issued by Fannie Mae or Freddie Mac under their operative documents may not be enforceable against the FHFA, or enforcement may be delayed during the course of the conservatorship or any future receivership. For example, the operative documents may provide that upon the occurrence of an event of default by Fannie Mae or Freddie Mac, holders of a requisite percentage of the mortgage-backed security may replace the entity as trustee. However, under the Federal Housing Finance Regulatory Reform Act of 2008, holders may not enforce this right if the event of default arises solely because a conservator or receiver has been appointed.

Pass-through securities – The underlying fund may invest in various debt obligations backed by pools of mortgages, corporate loans or other assets including, but not limited to, residential mortgage loans, home equity loans, mortgages on commercial buildings, consumer loans and equipment leases. Principal and interest payments made on the underlying asset pools backing these obligations are typically passed through to investors, net of any fees paid to any insurer or any guarantor of the securities. Pass-through securities may have either fixed or adjustable coupons. The risks of an investment in these obligations depend in part on the type of the collateral securing the obligations and the class of the instrument in which the fund invests. These securities include:

Mortgage-backed securities – These securities may be issued by U.S. government agencies and government-sponsored entities, such as Ginnie Mae, Fannie Mae and Freddie Mac, and by private entities. The payment of interest and principal on mortgage-backed obligations issued by U.S. government agencies may be guaranteed by the full faith and credit of the U.S. government (in the case of Ginnie Mae), or may be guaranteed by the issuer (in the case of Fannie Mae and Freddie Mac). However, these guarantees do not apply to the market prices and yields of these securities, which vary with changes in interest rates.

Mortgage-backed securities issued by private entities are structured similarly to those issued by U.S. government agencies. However, these securities and the underlying mortgages are not guaranteed by any government agencies and the underlying mortgages are not subject to the same underwriting requirements. These securities generally are structured with one or more types of credit enhancements such as insurance or letters of credit issued by private companies. Borrowers on the underlying mortgages are usually permitted to prepay their underlying mortgages. Prepayments can alter the effective maturity of these instruments. In addition, delinquencies, losses or defaults by borrowers can adversely affect the prices and volatility of these securities. Such delinquencies and losses can be exacerbated by declining or flattening housing and property values. This, along with other outside pressures, such as bankruptcies and financial difficulties experienced by mortgage loan originators, decreased investor demand for mortgage loans and mortgage-related securities and increased investor demand for yield, can adversely affect the value and liquidity of mortgage-backed securities.

Adjustable rate mortgage-backed securities – Adjustable rate mortgage-backed securities (“ARMS”) have interest rates that reset at periodic intervals. Acquiring ARMS permits the underlying fund to participate in increases in prevailing current interest rates through periodic adjustments in the coupons of mortgages underlying the pool on which ARMS are based. Such ARMS generally have higher current yield and lower price fluctuations than is the case with more traditional fixed income debt securities of comparable rating and maturity. In addition, when prepayments of principal are made on the underlying mortgages during periods of rising interest rates, the underlying fund can reinvest the proceeds of such prepayments at rates higher than those at which they were previously invested. Mortgages underlying most ARMS, however, have limits on the allowable annual or lifetime increases that can be made in the interest rate that the mortgagor pays. Therefore, if current interest rates rise above such limits over the period of the limitation, the underlying fund, when holding an ARMS, does not benefit from further increases in interest rates. Moreover, when interest rates are in excess of coupon rates (i.e., the rates being paid by mortgagors) of the mortgages, ARMS behave more like fixed income securities and less like adjustable rate securities and are subject to the risks associated with fixed income securities. In addition, during periods of rising interest rates, increases in the coupon rate of adjustable rate mortgages generally lag current market interest rates slightly, thereby creating the potential for capital depreciation on such securities.

Collateralized mortgage obligations (CMOs) – CMOs are also backed by a pool of mortgages or mortgage loans, which are divided into two or more separate bond issues. CMOs issued by U.S. government agencies are backed by agency mortgages, while privately issued CMOs may be backed by either government agency mortgages or private mortgages. Payments of principal and interest are passed through to each bond issue at varying schedules resulting in bonds with different coupons, effective maturities and sensitivities to interest rates. Some CMOs may be structured in a way that when interest rates change, the impact of changing prepayment rates on the effective maturities of certain issues of these securities is magnified. CMOs may be less liquid or may exhibit greater price volatility than other types of mortgage or asset-backed securities.

Commercial mortgage-backed securities – These securities are backed by mortgages on commercial property, such as hotels, office buildings, retail stores, hospitals and other

commercial buildings. These securities may have a lower prepayment uncertainty than other mortgage-related securities because commercial mortgage loans generally prohibit or impose penalties on prepayments of principal. In addition, commercial mortgage-related securities often are structured with some form of credit enhancement to protect against potential losses on the underlying mortgage loans. Many of the risks of investing in commercial mortgage-backed securities reflect the risks of investing in the real estate securing the underlying mortgage loans, including the effects of local and other economic conditions on real estate markets, the ability of tenants to make rental payments and the ability of a property to attract and retain tenants. Commercial mortgage-backed securities may be less liquid or exhibit greater price volatility than other types of mortgage or asset-backed securities and may be more difficult to value.

Asset-backed securities – These securities are backed by other assets such as credit card, automobile or consumer loan receivables, retail installment loans or participations in pools of leases. Credit support for these securities may be based on the underlying assets and/or provided through credit enhancements by a third party. The values of these securities are sensitive to changes in the credit quality of the underlying collateral, the credit strength of the credit enhancement, changes in interest rates and at times the financial condition of the issuer. Obligors of the underlying assets also may make prepayments that can change effective maturities of the asset-backed securities. These securities may be less liquid and more difficult to value than other securities.

Collateralized bond obligations (CBOs) and collateralized loan obligations (CLOs) – A CBO is a trust typically backed by a diversified pool of fixed-income securities, which may include high risk, lower rated securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, senior secured loans, senior unsecured loans, and subordinate corporate loans, including lower rated loans. CBOs and CLOs may charge management fees and administrative expenses.

For both CBOs and CLOs, the cash flows from the trust are split into two or more portions, called tranches, varying in risk and yield. The riskiest and highest yielding portion is the “equity” tranche which bears the bulk of any default by the bonds or loans in the trust and is constructed to protect the other, more senior tranches from default. Since they are partially protected from defaults, the more senior tranches typically have higher ratings and lower yields than the underlying securities in the trust and can be rated investment grade. Despite the protection from the equity tranche, the more senior tranches can still experience substantial losses due to actual defaults of the underlying assets, increased sensitivity to defaults due to impairment of the collateral or the more junior tranches, market anticipation of defaults, as well as potential general aversions to CBO or CLO securities as a class. Normally, these securities are privately offered and sold, and thus, are not registered under the securities laws. CBOs and CLOs may be less liquid, may exhibit greater price volatility and may be more difficult to value than other securities.

“IOs” and “POs” are issued in portions or tranches with varying maturities and characteristics. Some tranches may only receive the interest paid on the underlying mortgages (IOs) and others may only receive the principal payments (POs). The values of IOs and POs are extremely sensitive to interest rate fluctuations and prepayment rates, and IOs are also subject to the risk of early repayment of the underlying mortgages that will substantially reduce or eliminate interest payments.

Warrants and rights – Warrants and rights may be acquired by certain underlying funds in connection with other securities or separately. Warrants generally entitle, but do not obligate, their holder to purchase other equity or fixed income securities at a specified price at a later date. Rights are similar to warrants but typically have a shorter duration and are issued by a company to existing holders of its stock to provide those holders the right to purchase additional shares of stock at a later date. Warrants

and rights do not carry with them the right to dividends or voting rights with respect to the securities that they entitle their holder to purchase, and they do not represent any rights in the assets of the issuing company. Additionally, a warrant or right ceases to have value if it is not exercised prior to its expiration date. As a result, warrants and rights may be considered more speculative than certain other types of investments. Changes in the value of a warrant or right do not necessarily correspond to changes in the value of its underlying security. The price of a warrant or right may be more volatile than the price of its underlying security, and they therefore present greater potential for capital appreciation and capital loss. The effective price paid for warrants or rights added to the subscription price of the related security may exceed the value of the subscribed security's market price, such as when there is no movement in the price of the underlying security. The market for warrants or rights may be very limited and it may be difficult to sell them promptly at an acceptable price.

Depository receipts – Depository receipts are securities that evidence ownership interests in, and represent the right to receive, a security or a pool of securities that have been deposited with a bank or trust depository. Certain underlying funds may invest in American Depositary Receipts (“ADRs”), European Depositary Receipts (“EDRs”), Global Depositary Receipts (“GDRs”), and other similar securities. For ADRs, the depository is typically a U.S. financial institution and the underlying securities are issued by a non-U.S. entity. For other depository receipts, the depository may be a non-U.S. or a U.S. entity, and the underlying securities may be issued by a non-U.S. or a U.S. entity. Depository receipts will not necessarily be denominated in the same currency as their underlying securities. Generally, ADRs are issued in registered form, denominated in U.S. dollars, and designed for use in the U.S. securities markets. Other depository receipts, such as EDRs and GDRs, may be issued in bearer form, may be denominated in either U.S. dollars or in non-U.S. currencies, and are primarily designed for use in securities markets outside the United States. ADRs, EDRs and GDRs can be sponsored by the issuing bank or trust company or the issuer of the underlying securities. Although the issuing bank or trust company may impose charges for the collection of dividends and the conversion of such securities into the underlying securities, generally no fees are imposed on the purchase or sale of these securities other than transaction fees ordinarily involved with trading stock. Such securities may be less liquid or may trade at a lower price than the underlying securities of the issuer. Additionally, the issuers of securities underlying depository receipts may not be obligated to timely disclose information that is considered material under the securities laws of the United States. Therefore, less information may be available regarding these issuers than about the issuers of other securities and there may not be a correlation between such information and the market value of the depository receipts.

Inflation-linked bonds – The underlying fund may invest in inflation-linked bonds issued by governments, their agencies or instrumentalities and corporations.

The principal amount of an inflation-linked bond is adjusted in response to changes in the level of an inflation index, such as the Consumer Price Index for Urban Consumers (“CPURNSA”). If the index measuring inflation falls, the principal value or coupon of these securities will be adjusted downward. Consequently, the interest payable on these securities will be reduced. Also, if the principal value of these securities is adjusted according to the rate of inflation, the adjusted principal value repaid at maturity may be less than the original principal. In the case of U.S. Treasury Inflation-Protected Securities (“TIPS”), currently the only inflation-linked security that is issued by the U.S. Treasury, the principal amounts are adjusted daily based upon changes in the rate of inflation (as currently represented by the non-seasonally adjusted CPURNSA, calculated with a three-month lag). TIPS may pay interest semi-annually, equal to a fixed percentage of the inflation-adjusted principal amount. The interest rate on these bonds is fixed at issuance, but over the life of the bond this interest may be paid on an increasing or decreasing principal amount that has been adjusted for inflation. The current market value of TIPS is not guaranteed and will fluctuate. However, the U.S. government guarantees that, at maturity, principal will be repaid at the higher of the original face value of the security (in the event of deflation) or the inflation adjusted value.

Other non-U.S. sovereign governments also issue inflation-linked securities that are tied to their own local consumer price indexes and that offer similar deflationary protection. In certain of these non-U.S. jurisdictions, the repayment of the original bond principal upon the maturity of an inflation-linked bond is not guaranteed, allowing for the amount of the bond repaid at maturity to be less than par. Corporations also periodically issue inflation-linked securities tied to CPURNSA or similar inflationary indexes. While TIPS and non-U.S. sovereign inflation-linked securities are currently the largest part of the inflation-linked market, the underlying fund may invest in corporate inflation-linked securities.

The value of inflation-linked securities is expected to change in response to the changes in real interest rates. Real interest rates, in turn, are tied to the relationship between nominal interest rates and the rate of inflation. If inflation were to rise at a faster rate than nominal interest rates, real interest rates would decline, leading to an increase in value of the inflation-linked securities. In contrast, if nominal interest rates were to increase at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-linked securities. There can be no assurance, however, that the value of inflation-linked securities will be directly correlated to the changes in interest rates. If interest rates rise due to reasons other than inflation, investors in these securities may not be protected to the extent that the increase is not reflected in the security's inflation measure.

The interest rate for inflation-linked bonds is fixed at issuance as a percentage of this adjustable principal. Accordingly, the actual interest income may both rise and fall as the principal amount of the bonds adjusts in response to movements of the consumer price index. For example, typically interest income would rise during a period of inflation and fall during a period of deflation.

The market for inflation-linked securities may be less developed or liquid, and more volatile, than certain other securities markets. There is a limited number of inflation-linked securities currently available for the underlying fund to purchase, making the market less liquid and more volatile than the U.S. Treasury and agency markets.

Real estate investment trusts – Real estate investment trusts ("REITs"), which primarily invest in real estate or real estate-related loans, may issue equity or debt securities. Equity REITs own real estate properties, while mortgage REITs hold construction, development and/or long-term mortgage loans. The values of REITs may be affected by changes in the value of the underlying property of the trusts, the creditworthiness of the issuer, property taxes, interest rates, tax laws and regulatory requirements, such as those relating to the environment. Both types of REITs are dependent upon management skill and the cash flows generated by their holdings, the real estate market in general and the possibility of failing to qualify for any applicable pass-through tax treatment or failing to maintain any applicable exemptive status afforded under relevant laws.

Variable and floating rate obligations – The interest rates payable on certain securities and other instruments in which certain of the underlying funds may invest may not be fixed but may fluctuate based upon changes in market interest rates or credit ratings. Variable and floating rate obligations bear coupon rates that are adjusted at designated intervals, based on the then current market interest rates or credit ratings. The rate adjustment features tend to limit the extent to which the market value of the obligations will fluctuate. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares.

The London Interbank Offered Rate ("LIBOR") is one of the most widely used interest rate benchmarks and is intended to represent the rate at which contributing banks may obtain short-term borrowings from each other in the London interbank market. On July 27, 2017, the U.K. Financial Conduct Authority ("FCA"), which regulates LIBOR, announced that the FCA will no longer persuade or compel banks to submit rates for the calculation of LIBOR after 2021. As a result, post-2021, LIBOR may no longer be available or may no longer be deemed an appropriate reference rate upon which to

determine the interest rate on certain loans, bonds, derivatives and other instruments in the fund's portfolio. In light of this eventuality, public and private sector industry initiatives are currently underway to identify new or alternative reference rates to be used in place of LIBOR. There is no assurance that the composition or characteristics of any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that instruments using an alternative rate will have the same volume or liquidity. This, in turn, may affect the value or return on certain of the fund's investments, result in costs incurred in connection with closing out positions and entering into new trades and reduce the effectiveness of related fund transactions such as hedges. Since the usefulness of LIBOR as a benchmark could deteriorate during the transition period, these effects could occur prior to the end of 2021. Relatedly, there are outstanding contracts governing bonds and other instruments which reference LIBOR that are due to mature beyond the end of 2021. These "legacy contracts" will need to be transitioned to an alternative reference rate, and a failure to do so may adversely impact the security (for example, under existing contract language the instrument could fall back to a fixed rate or have no fallback rate) and create contractual uncertainty, as well as market and litigation risk. These risks may also apply with respect to potential changes in connection with other interbank offering rates (e.g., Euribor) and other indices, rates and values that may be used as "benchmarks" and are the subject of recent regulatory reform.

Restricted or illiquid securities – The underlying fund may purchase securities subject to restrictions on resale. Restricted securities may only be sold pursuant to an exemption from registration under the Securities Act of 1933, as amended (the "1933 Act"), or in a registered public offering. Restricted securities held by the underlying fund are often eligible for resale under Rule 144A, an exemption under the 1933 Act allowing for resales to "Qualified Institutional Buyers." Where registration is required, the holder of a registered security may be obligated to pay all or part of the registration expense and a considerable period may elapse between the time it decides to seek registration and the time it may be permitted to sell a security under an effective registration statement. Difficulty in selling such securities may result in a loss to the underlying fund or cause it to incur additional administrative costs.

Some underlying fund holdings (including some restricted securities) may be deemed illiquid if the underlying fund expects that a reasonable portion of the holding cannot be sold in seven calendar days or less without the sale significantly changing the market value of the investment. The determination of whether a holding is considered illiquid is made by the Series' adviser under a liquidity risk management program adopted by the Series' board and administered by the Series' adviser. The underlying fund may incur significant additional costs in disposing of illiquid securities.

Loan assignments and participations – The underlying fund may invest in loans or other forms of indebtedness that represent interests in amounts owed by corporations or other borrowers (collectively "borrowers"). Loans may be originated by the borrower in order to address its working capital needs, as a result of a reorganization of the borrower's assets and liabilities (recapitalizations), to merge with or acquire another company (mergers and acquisitions), to take control of another company (leveraged buy-outs), to provide temporary financing (bridge loans), or for other corporate purposes.

Some loans may be secured in whole or in part by assets or other collateral. The greater the value of the assets securing the loan the more the lender is protected against loss in the case of nonpayment of principal or interest. Loans made to highly leveraged borrowers may be especially vulnerable to adverse changes in economic or market conditions and may involve a greater risk of default.

Some loans may represent revolving credit facilities or delayed funding loans, in which a lender agrees to make loans up to a maximum amount upon demand by the borrower during a specified term. These commitments may have the effect of requiring the underlying fund to increase its investment in a company at a time when it might not otherwise decide to do so (including at a time when the company's financial condition makes it unlikely that such amounts will be repaid). To the extent that the

underlying fund is committed to advance additional funds, the underlying fund will segregate assets determined to be liquid in an amount sufficient to meet such commitments.

Some loans may represent debtor-in-possession financings (commonly known as “DIP financings”). DIP financings are arranged when an entity seeks the protections of the bankruptcy court under Chapter 11 of the U.S. Bankruptcy Code. These financings allow the entity to continue its business operations while reorganizing under Chapter 11. Such financings constitute senior liens on unencumbered collateral (i.e., collateral not subject to other creditors’ claims). There is a risk that the entity will not emerge from Chapter 11 and will be forced to liquidate its assets under Chapter 7 of the U.S. Bankruptcy Code. In the event of liquidation, the underlying fund’s only recourse will be against the collateral securing the DIP financing.

The investment adviser generally makes investment decisions based on publicly available information, but may rely on non-public information if necessary. Borrowers may offer to provide lenders with material, non-public information regarding a specific loan or the borrower in general. The investment adviser generally chooses not to receive this information. As a result, the investment adviser may be at a disadvantage compared to other investors that may receive such information. The investment adviser’s decision not to receive material, non-public information may impact the investment adviser’s ability to assess a borrower’s requests for amendments or waivers of provisions in the loan agreement. However, the investment adviser may on a case-by-case basis decide to receive such information when it deems prudent. In these situations the investment adviser may be restricted from trading the loan or buying or selling other debt and equity securities of the borrower while it is in possession of such material, non-public information, even if such loan or other security is declining in value.

The underlying fund normally acquires loan obligations through an assignment from another lender, but also may acquire loan obligations by purchasing participation interests from lenders or other holders of the interests. When the underlying fund purchases assignments, it acquires direct contractual rights against the borrower on the loan. The underlying fund acquires the right to receive principal and interest payments directly from the borrower and to enforce their rights as a lender directly against the borrower. However, because assignments are arranged through private negotiations between potential assignees and potential assignors, the rights and obligations acquired by the underlying fund as the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender. Loan assignments are often administered by a financial institution that acts as agent for the holders of the loan, and the underlying fund may be required to receive approval from the agent and/or borrower prior to the purchase of a loan. Risks may also arise due to the inability of the agent to meet its obligations under the loan agreement.

Loan participations are loans or other direct debt instruments that are interests in amounts owed by the borrower to another party. They may represent amounts owed to lenders or lending syndicates, to suppliers of goods or services, or to other parties. The underlying fund will have the right to receive payments of principal, interest and any fees to which it is entitled only from the lender selling the participation and only upon receipt by the lender of the payments from the borrower. In connection with purchasing participations, the underlying fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower. In addition, the underlying fund may not directly benefit from any collateral supporting the loan in which it has purchased the participation and the underlying fund will have to rely on the agent bank or other financial intermediary to apply appropriate credit remedies. As a result, the underlying fund will be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, the underlying fund may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

Investments in loan participations and assignments present the possibility that the underlying fund could be held liable as a co-lender under emerging legal theories of lender liability. In addition, if the

loan is foreclosed, the underlying fund could be part owner of any collateral and could bear the costs and liabilities of owning and disposing of the collateral. The underlying fund anticipates that loan participations could be sold only to a limited number of institutional investors. In addition, some loan participations and assignments may not be rated by major rating agencies and may not be protected by securities laws.

Derivatives – In pursuing its investment objective, the underlying fund may invest in derivative instruments. A derivative is a financial instrument, the value of which depends on, or is otherwise derived from, another underlying variable. Most often, the variable underlying a derivative is the price of a traded asset, such as a traditional cash security (e.g., a stock or bond), a currency or a commodity; however, the value of a derivative can be dependent on almost any variable, from the level of an index or a specified rate to the occurrence (or non-occurrence) of a credit event with respect to a specified reference asset. In addition to investing in forward currency contracts, as described above under “Currency transactions,” the underlying fund may take positions in futures contracts, interest rate swaps and credit default swap indices, each of which is a derivative instrument described in greater detail below.

Derivative instruments may be distinguished by the manner in which they trade: some are standardized instruments that trade on an organized exchange while others are individually negotiated and traded in the over-the-counter (OTC) market. Derivatives also range broadly in complexity, from simple derivatives to more complex instruments. As a general matter, however, all derivatives – regardless of the manner in which they trade or their relative complexities – entail certain risks, some of which are different from, and potentially greater than, the risks associated with investing directly in traditional cash securities.

As is the case with traditional cash securities, derivative instruments are generally subject to counterparty credit risk; however, in some cases, derivatives may pose counterparty risks greater than those posed by cash securities. The use of derivatives involves the risk that a loss may be sustained by the underlying fund as a result of the failure of the underlying fund’s counterparty to make required payments or otherwise to comply with its contractual obligations. For some derivatives, though, the value of – and, in effect, the return on – the instrument may be dependent on both the individual credit of the underlying fund’s counterparty and on the credit of one or more issuers of any underlying assets. If the underlying fund does not correctly evaluate the creditworthiness of its counterparty and, where applicable, of issuers of any underlying reference assets, the underlying fund’s investment in a derivative instrument may result in losses. Further, if the underlying fund’s counterparty were to default on its obligations, the underlying fund’s contractual remedies against such counterparty may be subject to applicable bankruptcy and insolvency laws, which could affect the underlying fund’s rights as a creditor and delay or impede the underlying fund’s ability to receive the net amount of payments that it is contractually entitled to receive.

The value of some derivative instruments in which the underlying fund invests may be particularly sensitive to changes in prevailing interest rates, currency exchange rates or other market conditions. Like the underlying fund’s other investments, the ability of the underlying fund to successfully utilize such derivative instruments may depend in part upon the ability of the underlying fund’s investment adviser to accurately forecast interest rates and other economic factors. The success of the underlying fund’s derivative investment strategy will also depend on the investment adviser’s ability to assess and predict the impact of market or economic developments on the derivative instruments in which the underlying fund invests, in some cases without having had the benefit of observing the performance of a derivative under all possible market conditions. If the investment adviser incorrectly forecasts such factors and has taken positions in derivative instruments contrary to prevailing market trends, or if the investment adviser incorrectly predicts the impact of developments on a derivative instrument, the underlying fund could be exposed to the risk of loss.

Certain derivatives may also be subject to liquidity and valuation risks. The potential lack of a liquid secondary market for a derivative (and, particularly, for an OTC derivative) may cause difficulty in valuing or selling the instrument. If a derivative transaction is particularly large or if the relevant market is illiquid, as is often the case with many privately-negotiated OTC derivatives, the underlying fund may not be able to initiate a transaction or to liquidate a position at an advantageous time or price. Particularly when there is no liquid secondary market for the underlying fund's derivative positions, the underlying fund may encounter difficulty in valuing such illiquid positions. The value of a derivative instrument does not always correlate perfectly with its underlying asset, rate or index, and many derivatives, and OTC derivatives in particular, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the underlying fund.

Because certain derivative instruments may obligate the underlying fund to make one or more potential future payments, which could significantly exceed the value of the underlying fund's initial investments in such instruments, derivative instruments may also have a leveraging effect on the underlying fund's portfolio. Certain derivatives have the potential for unlimited loss, irrespective of the size of the underlying fund's investment in the instrument. When the underlying fund leverages its portfolio, investments in that underlying fund will tend to be more volatile, resulting in larger gains or losses in response to market changes. In accordance with applicable regulatory requirements, the underlying fund will generally segregate or earmark liquid assets, or enter into offsetting financial positions, to cover its obligations under derivative instruments, effectively limiting the risk of leveraging the underlying fund's portfolio. Because the underlying fund is legally required to maintain asset coverage or offsetting positions in connection with leveraging derivative instruments, the underlying fund's investments in such derivatives may also require the underlying fund to buy or sell portfolio securities at disadvantageous times or prices in order to comply with applicable requirements.

Options – An option on a security (or an index) is a contract that gives the holder of the option, in return for a premium payment, the right to buy from (in the case of a call) or sell to (in the case of a put) the writer of the option the security underlying the option (or the cash value of the index underlying the option) at a specified exercise price. The writer of an option on a security has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price (in the case of a call) or to pay the exercise price upon delivery of the underlying security (in the case of a put). Upon exercise, the writer of an option on an index is obligated to pay the difference between the cash value of the index and the exercise price multiplied by a specified multiplier for the index option.

As part of its managed risk strategy, the fund will purchase put options on equity indexes in standardized contracts traded on foreign or domestic securities exchanges, boards of trade, or similar entities. By purchasing a put option, the fund obtains the right (but not the obligation) to sell the instrument underlying the option (or the cash value of the index underlying the option) at a specified exercise price, referred to as the strike price. In return for this right, the fund pays the current market price, or the option premium, for the option. The fund may terminate its position in a put option by allowing the option to expire or by exercising the option. If the option is allowed to expire, the fund will lose the entire premium. If the option is exercised, the fund completes the sale of the underlying instrument (or delivers the cash value of the index underlying the option) at the strike price. The fund may also terminate a put option position by entering into opposing close-out transactions in advance of the option expiration date.

As a buyer of a put option, the fund can expect to realize a gain if the price of the underlying instrument or index falls substantially. However, if the price of the underlying instrument or index does not fall enough to offset the cost of purchasing the option, the fund can expect to

suffer a loss, albeit a loss limited to the amount of the option premium plus any applicable transaction costs.

As part of its managed risk strategy, the fund may also purchase exchange-traded equity index call options. The features of call options are essentially the same as those of put options, except that the purchaser of a call option obtains the right (but not the obligation) to purchase, rather than sell, the underlying instrument (or the cash value of the index underlying the option) at the specified strike price. The buyer of a call option typically attempts to participate in potential price increases of the underlying instrument or index with risk limited to the cost of the option if the price of the underlying instrument or index falls. At the same time, the call option buyer can expect to suffer a loss if the price of the underlying instrument or index does not rise sufficiently to offset the cost of the option.

Although the fund's investment adviser and subadviser expect that the fund will, at all times, retain a net long position in exchange-traded equity index put options, in certain market conditions, the fund may sell, or write, options on equity indexes. The writer of a put or call option takes the opposite side of the transaction from the option's purchaser. In return for receipt of the option premium, the writer assumes the obligation to pay or receive the strike price for the option's underlying instrument or index if the other party to the option chooses to exercise it. The writer may seek to terminate a position in a put option before exercise by closing out the option. If the market for the relevant put option is not liquid, however, the writer must continue to be prepared to pay the strike price while the option is outstanding, regardless of price changes.

If the price of the underlying instrument or index rises, a put writer would generally expect to profit, although its gain would be limited to the amount of the premium it received. If the price of the underlying instrument or index remains the same over time, it is likely that the writer would also profit because it should be able to close out the option at a lower price. If the price of the underlying instrument or index falls, the put writer would expect to suffer a loss. This loss should be less than the loss from purchasing the underlying instrument or exposure to the underlying index directly, however, because the premium received for writing the option should mitigate the effects of the decline.

Writing a call option obligates the writer to sell or deliver the option's underlying instrument or to make a net cash settlement payment, as applicable, in return for the strike price upon exercise of the option. The characteristics of writing call options are similar to those of writing put options, except that writing calls generally is a profitable strategy if prices remain the same or fall. Through receipt of the option premium, a call writer should mitigate the effects of a price increase. At the same time, because a call writer must be prepared to deliver the underlying instrument or make a net cash settlement payment, as applicable, in return for the strike price, even if its current value is greater, a call writer gives up some ability to participate in security price increases.

The fund will cover its obligations when it writes call or put options. For a call option on an index, the option is covered if the fund maintains with its custodian liquid assets in an amount equal to the fund's net obligation under the option. A written call option is also covered if the fund holds a call on the same index as the call written where the exercise price of the call held is (i) equal to or less than the exercise price of the call written or (ii) greater than the exercise price of the call written, provided the difference is maintained by the fund in segregated liquid assets. A written put option on an index is covered if the fund segregates liquid assets equal to the exercise price. A put option on an index is also covered if the fund holds a put on the same index as the put written where the exercise price of the put held is (i) equal to or greater than the exercise price of the put written or (ii) less than the exercise price of the put written, provided the difference is maintained by the fund in segregated liquid assets. Obligations

under written call and put options so covered will not be deemed to be senior securities for the purposes of the fund's investment restrictions concerning senior securities and borrowings.

Several risks are associated with transactions in options on securities and on indexes. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, effectively causing a given transaction not to achieve its objectives. When a put or call option on a particular security or index is purchased to hedge against price movements in a related security or index, the price to close out the put or call option may move more or less than the price of the related security or index.

Options prices can diverge from the prices of their underlying instruments or indexes for a number of reasons. Options prices are affected by such factors as current and anticipated short-term interest rates, changes in volatility of the underlying instrument or index, and the time remaining until expiration of the contract, which may not affect security prices in the same way. Imperfect correlation may also result from differing levels of demand in the options and futures markets and the securities markets, from structural differences in how options and futures and securities are traded, or from imposition of daily price fluctuation limits or trading halts. The fund may purchase or sell options contracts with a greater or lesser value than the securities it wishes to hedge or intends to purchase in order to attempt to compensate for differences in volatility between the contract and the securities, although this may not be successful in all cases. If price changes in the fund's options positions are poorly correlated with its other investments, the positions may fail to produce anticipated gains or result in losses that are not offset by gains in other investments.

There is no assurance that a liquid market will exist for any particular options contract at any particular time. Options may have relatively low trading volumes and liquidity if their strike prices are not close to the current prices of the underlying instruments or indexes. In addition, exchanges may establish daily price fluctuation limits for exchange-traded options contracts and may halt trading if a contract's price moves upward or downward more than the limit in a given day. On volatile trading days when the price fluctuation limit is reached or a trading halt is imposed, it may be impossible to enter into new positions or to close out existing positions. If the market for a contract is not liquid because of price fluctuation limits or otherwise, it could prevent prompt liquidation of unfavorable positions and could potentially require the fund to continue to hold a position until delivery or expiration regardless of changes in its value. As a result, the fund's access to other assets held to cover its options positions could also be impaired.

Combined positions involve purchasing and writing options in combination with each other, or in combination with futures or forward contracts, in order to adjust the risk and return profile of the fund's overall position. For example, purchasing a put option and writing a call option on the same underlying instrument or index would construct a combined position whose risk and return characteristics are similar to selling a futures contract. Another possible combined position would involve writing a call option at one strike price and buying a call option at a lower price to reduce the risk of the written call option in the event of a substantial price increase. Because such combined options positions involve multiple trades, they result in higher transaction costs and may be more difficult to open and close out.

Futures – The underlying fund may enter into futures contracts to seek to manage the underlying fund's interest rate sensitivity by increasing or decreasing the duration of the underlying fund or a portion of the underlying fund's portfolio. A futures contract is an agreement to buy or sell a security or other financial instrument (the "reference asset") for a set price on a future date. Futures contracts are standardized, exchange-traded contracts, and,

when a futures contract is bought or sold, the underlying fund will incur brokerage fees and will be required to maintain margin deposits.

Unlike when the underlying fund purchases or sells a security, such as a stock or bond, no price is paid or received by the underlying fund upon the purchase or sale of a futures contract. When the underlying fund enters into a futures contract, the underlying fund is required to deposit with its futures broker, known as a futures commission merchant (FCM), a specified amount of liquid assets in a segregated account in the name of the FCM at the applicable derivatives clearinghouse or exchange. This amount, known as initial margin, is set by the futures exchange on which the contract is traded and may be significantly modified during the term of the contract. The initial margin is in the nature of a performance bond or good faith deposit on the futures contract, which is returned to the underlying fund upon termination of the contract, assuming all contractual obligations have been satisfied. Additionally, on a daily basis, the underlying fund pays or receives cash, or variation margin, equal to the daily change in value of the futures contract. Variation margin does not represent a borrowing or loan by the underlying fund but is instead a settlement between the underlying fund and the FCM of the amount one party would owe the other if the futures contract expired. In computing daily net asset value, the underlying fund will mark-to-market its open futures positions. In the event of the bankruptcy or insolvency of an FCM that holds margin on behalf of the underlying fund, the underlying fund may be entitled to return of margin owed to it only in proportion to the amount received by the FCM's other customers, potentially resulting in losses to the underlying fund. An event of bankruptcy or insolvency at a clearinghouse or exchange holding initial margin could also result in losses for the underlying fund.

When the underlying fund invests in futures contracts and deposits margin with an FCM, the underlying fund becomes subject to so-called "fellow customer" risk - that is, the risk that one or more customers of the FCM will default on their obligations and that the resulting losses will be so great that the FCM will default on its obligations and margin posted by one customer, such as the underlying fund, will be used to cover a loss caused by a different defaulting customer. Applicable rules generally prohibit the use of one customer's funds to meet the obligations of another customer and limit the ability of an FCM to use margin posed by non-defaulting customers to satisfy losses caused by defaulting customers. As a general matter, an FCM is required to use its own funds to meet a defaulting customer's obligations. While a customer's loss would likely need to be substantial before non-defaulting customers would be exposed to loss on account of fellow customer risk, applicable rules nevertheless permit the commingling of margin and do not limit the mutualization of customer losses from investment losses, custodial failures, fraud or other causes. If the loss is so great that, notwithstanding the application of an FCM's own funds, there is a shortfall in the amount of customer funds required to be held in segregation, the FCM could default and be placed into bankruptcy. Under these circumstances, bankruptcy law provides that non-defaulting customers will share pro rata in any shortfall. A shortfall in customer segregated funds may also make the transfer of the accounts of non-defaulting customers to another FCM more difficult.

Although certain futures contracts, by their terms, require actual future delivery of and payment for the reference asset, in practice, most futures contracts are usually closed out before the delivery date by offsetting purchases or sales of matching futures contracts. Closing out an open futures contract purchase or sale is effected by entering into an offsetting futures contract sale or purchase, respectively, for the same aggregate amount of the identical reference asset and the same delivery date with the same FCM. If the offsetting purchase price is less than the original sale price (in each case taking into account transaction costs, including brokerage fees), the underlying fund realizes a gain; if it is more, the underlying fund realizes a loss. Conversely, if the offsetting sale price is more than the original purchase price (in each case taking into account transaction costs, including brokerage fees), the underlying fund realizes a gain; if it is less, the underlying fund realizes a loss.

The underlying fund is generally required to segregate liquid assets equivalent to the underlying fund's outstanding obligations under each futures contract. With respect to long positions in futures contracts that are not legally required to cash settle, the underlying fund will segregate or earmark liquid assets in an amount equal to the contract price the underlying fund will be required to pay on settlement less the amount of margin deposited with an FCM. For short positions in futures contracts that are not legally required to cash settle, the underlying fund will segregate or earmark liquid assets in an amount that, when added to the amounts deposited with an FCM as margin, equals the market value of the reference asset underlying the futures contract. With respect to futures contracts that are required to cash settle, however, the underlying fund is permitted to segregate or earmark liquid assets in an amount that, when added to the amounts deposited with an FCM as margin, equals the underlying fund's daily marked-to-market (net) obligation under the contract (i.e., the daily market value of the contract itself), if any; in other words, the underlying fund may set aside its daily net liability, if any, rather than the notional value of the futures contract. By segregating or earmarking assets equal only to its net obligation under cash-settled futures, the underlying fund may be able to utilize these contracts to a greater extent than if the underlying fund were required to segregate or earmark assets equal to the full contract price or current market value of the futures contract. Such segregation of assets is intended to ensure that the underlying fund has assets available to satisfy its obligations with respect to futures contracts and to limit any potential leveraging of the underlying fund's portfolio. However, segregation of liquid assets will not limit the underlying fund's exposure to loss. To maintain a sufficient amount of segregated assets, the underlying fund may also have to sell less liquid portfolio securities at disadvantageous prices, and the earmarking of liquid assets will have the effect of limiting the underlying fund's ability to otherwise invest those assets in other securities or instruments.

The value of a futures contract tends to increase and decrease in tandem with the value of its underlying reference asset. Purchasing futures contracts will, therefore, tend to increase the underlying fund's exposure to positive and negative price fluctuations in the reference asset, much as if the underlying fund had purchased the reference asset directly. When the underlying fund sells a futures contract, by contrast, the value of its futures position will tend to move in a direction contrary to the market for the reference asset. Accordingly, selling futures contracts will tend to offset both positive and negative market price changes, much as if the reference asset had been sold.

There is no assurance that a liquid market will exist for any particular futures contract at any particular time. Futures exchanges may establish daily price fluctuation limits for futures contracts and may halt trading if a contract's price moves upward or downward more than the limit in a given day. On volatile trading days, when the price fluctuation limit is reached and a trading halt is imposed, it may be impossible to enter into new positions or close out existing positions. If the market for a futures contract is not liquid because of price fluctuation limits or other market conditions, the underlying fund may be prevented from promptly liquidating unfavorable futures positions and the underlying fund could be required to continue to hold a position until delivery or expiration regardless of changes in its value, potentially subjecting the underlying fund to substantial losses. Additionally, the underlying fund may not be able to take other actions or enter into other transactions to limit or reduce its exposure to the position. Under such circumstances, the underlying fund would remain obligated to meet margin requirements until the position is cleared. As a result, the underlying fund's access to other assets held to cover its futures positions could also be impaired.

Although futures exchanges generally operate similarly in the United States and abroad, foreign futures exchanges may follow trading, settlement and margin procedures that are different than those followed by futures exchanges in the United States. Futures contracts traded outside the United States may not involve a clearing mechanism or related guarantees and may involve greater risk of loss than U.S.-traded contracts, including potentially greater

risk of losses due to insolvency of a futures broker, exchange member, or other party that may owe initial or variation margin to the underlying fund. Margin requirements on foreign futures exchanges may be different than those of futures exchanges in the United States, and, because initial and variation margin payments may be measured in foreign currency, a futures contract traded outside the United States may also involve the risk of foreign currency fluctuations.

Interest rate swaps – The underlying fund may enter into interest rate swaps to seek to manage the interest rate sensitivity of the underlying fund by increasing or decreasing the duration of the underlying fund or a portion of the underlying fund’s portfolio. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in an interest rate or rates. Typically, one interest rate is fixed and the other is based on a designated short-term interest rate such as the London Interbank Offered Rate (LIBOR), prime rate or other benchmark. Interest rate swaps generally do not involve the delivery of securities or other principal amounts. Rather, cash payments are exchanged by the parties based on the application of the designated interest rates to a notional amount, which is the predetermined dollar principal of the trade upon which payment obligations are computed. Accordingly, the underlying fund’s current obligation or right under the swap agreement is generally equal to the net amount to be paid or received under the swap agreement based on the relative value of the position held by each party. The underlying fund will generally segregate assets with a daily value at least equal to the excess, if any, of the underlying fund’s accrued obligations under the swap agreement over the accrued amount the underlying fund is entitled to receive under the agreement, less the value of any posted margin or collateral on deposit with respect to the position.

The use of interest rate swaps involves certain risks, including losses if interest rate changes are not correctly anticipated by the underlying fund’s investment adviser. To the extent the underlying fund enters into bilaterally negotiated swap transactions, the underlying fund will enter into swap agreements only with counterparties that meet certain credit standards; however, if the counterparty’s creditworthiness deteriorates rapidly and the counterparty defaults on its obligations under the swap agreement or declares bankruptcy, the underlying fund may lose any amount it expected to receive from the counterparty. Certain interest rate swap transactions are currently subject to mandatory central clearing or may be eligible for voluntary central clearing. Because clearing interposes a central clearinghouse as the ultimate counterparty to each participant’s swap, central clearing is intended to decrease (but not eliminate) counterparty risk relative to uncleared bilateral swaps. Additionally, the term of an interest rate swap can be days, months or years and, as a result, certain swaps may be less liquid than others.

Credit default swap indices – In order to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks, the underlying fund may invest in credit default swap indices, including CDX and iTraxx indices (collectively referred to as “CDSIs”). A CDSI is based on a portfolio of credit default swaps with similar characteristics, such as credit default swaps on high-yield bonds. In a typical CDSI transaction, one party – the protection buyer – is obligated to pay the other party – the protection seller – a stream of periodic payments over the term of the contract. If a credit event, such as a default or restructuring, occurs with respect to any of the underlying reference obligations, the protection seller must pay the protection buyer the loss on those credits. Also, if a restructuring credit event occurs in an iTraxx index, the underlying fund as protection buyer may receive a single name credit default swap (CDS) contract representing the relevant constituent.

The underlying fund may enter into a CDSI transaction as either protection buyer or protection seller. If the underlying fund is a protection buyer, it would pay the counterparty a periodic stream of payments over the term of the contract and would not recover any of those payments if no credit events were to occur with respect to any of the underlying reference

obligations. However, if a credit event did occur, the underlying fund, as a protection buyer, would have the right to deliver the referenced debt obligations or a specified amount of cash, depending on the terms of the applicable agreement, and to receive the par value of such debt obligations from the counterparty protection seller. As a protection seller, the underlying fund would receive fixed payments throughout the term of the contract if no credit events were to occur with respect to any of the underlying reference obligations. If a credit event were to occur, however, the value of any deliverable obligation received by the underlying fund, coupled with the periodic payments previously received by the underlying fund, may be less than the full notional value that the underlying fund, as a protection seller, pays to the counterparty protection buyer, effectively resulting in a loss of value to the underlying fund. Furthermore, as a protection seller, the underlying fund would effectively add leverage to its portfolio because it would have investment exposure to the notional amount of the swap transaction.

The use of CDSI, like all other swap agreements, is subject to certain risks, including the risk that the underlying fund's counterparty will default on its obligations. If such a default were to occur, any contractual remedies that the underlying fund might have may be subject to applicable bankruptcy laws, which could delay or limit the underlying fund's recovery. Thus, if the underlying fund's counterparty to a CDSI transaction defaults on its obligation to make payments thereunder, the underlying fund may lose such payments altogether or collect only a portion thereof, which collection could involve substantial costs or delays. Certain CDSI transactions are subject to mandatory central clearing or may be eligible for voluntary central clearing. Because clearing interposes a central clearinghouse as the ultimate counterparty to each participant's swap, central clearing is intended to decrease (but not eliminate) counterparty risk relative to uncleared bilateral swaps.

Additionally, when the underlying fund invests in a CDSI as a protection seller, the underlying fund will be indirectly exposed to the creditworthiness of issuers of the underlying reference obligations in the index. If the investment adviser to the underlying fund does not correctly evaluate the creditworthiness of issuers of the underlying instruments on which the CDSI is based, the investment could result in losses to the underlying fund.

Pursuant to regulations and published positions of the U.S. Securities and Exchange Commission, the underlying fund's obligations under a CDSI agreement will be accrued daily and, where applicable, offset against any amounts owing to the underlying fund. In connection with CDSI transactions in which the underlying fund acts as protection buyer, the underlying fund will segregate liquid assets with a value at least equal to the underlying fund's exposure (i.e., any accrued but unpaid net amounts owed by the underlying fund to any counterparty), on a marked-to-market basis, less the value of any posted margin. When the underlying fund acts as protection seller, the underlying fund will segregate liquid assets with a value at least equal to the full notional amount of the swap, less the value of any posted margin. Such segregation is intended to ensure that the underlying fund has assets available to satisfy its obligations with respect to CDSI transactions and to limit any potential leveraging of the underlying fund's portfolio. However, segregation of liquid assets will not limit the underlying fund's exposure to loss. To maintain this required margin, the underlying fund may also have to sell portfolio securities at disadvantageous prices, and the earmarking of liquid assets will have the effect of limiting the underlying fund's ability to otherwise invest those assets in other securities or instruments.

Repurchase agreements – The underlying fund may enter into repurchase agreements, or “repos”, under which the underlying fund buys a security and obtains a simultaneous commitment from the seller to repurchase the security at a specified time and price. Because the security purchased constitutes collateral for the repurchase obligation, a repo may be considered a loan by the underlying

fund that is collateralized by the security purchased. Repos permit the underlying fund to maintain liquidity and earn income over periods of time as short as overnight.

The seller must maintain with a custodian collateral equal to at least the repurchase price, including accrued interest. In tri-party repos, a third party custodian, called a clearing bank, facilitates repo clearing and settlement, including by providing collateral management services. However, as an alternative to tri-party repos, the underlying fund could enter into bilateral repos, where the parties themselves are responsible for settling transactions.

The underlying fund will only enter into repos involving securities of the type in which they could otherwise invest. If the seller under the repo defaults, the underlying fund may incur a loss if the value of the collateral securing the repo has declined and may incur disposition costs and delays in connection with liquidating the collateral. If bankruptcy proceedings are commenced with respect to the seller, realization of the collateral by the underlying fund may be delayed or limited.

Cash and cash equivalents – The underlying fund may also hold cash or invest in cash equivalents. Cash equivalents include, but are not limited to: (a) shares of money market or similar funds managed by the investment adviser or its affiliates; (b) shares of other money market funds; (c) commercial paper; (d) short-term bank obligations (for example, certificates of deposit, bankers' acceptances (time drafts on a commercial bank where the bank accepts an irrevocable obligation to pay at maturity)) or bank notes; (e) savings association and savings bank obligations (for example, bank notes and certificates of deposit issued by savings banks or savings associations); (f) securities of the U.S. government, its agencies or instrumentalities that mature, or that may be redeemed, in one year or less; and (g) higher quality corporate bonds and notes that mature, or that may be redeemed, in one year or less.

There is no limit on the extent to which the underlying fund may take temporary defensive measures. In taking such measures, the underlying fund may fail to achieve its investment objective.

Commercial paper – An underlying fund may purchase commercial paper. Commercial paper refers to short-term promissory notes issued by a corporation to finance its current operations. Such securities normally have maturities of thirteen months or less and, though commercial paper is often unsecured, commercial paper may be supported by letters of credit, surety bonds or other forms of collateral. Maturing commercial paper issuances are usually repaid by the issuer from the proceeds of new commercial paper issuances. As a result, investment in commercial paper is subject to rollover risk, or the risk that the issuer cannot issue enough new commercial paper to satisfy its outstanding commercial paper. Like all fixed income securities, commercial paper prices are susceptible to fluctuations in interest rates. If interest rates rise, commercial paper prices will decline and vice versa. However, the short-term nature of a commercial paper investment makes it less susceptible to volatility than many other fixed income securities because interest rate risk typically increases as maturity lengths increase. Commercial paper tends to yield smaller returns than longer-term corporate debt because securities with shorter maturities typically have lower effective yields than those with longer maturities. As with all fixed income securities, there is a chance that the issuer will default on its commercial paper obligations and commercial paper may become illiquid or suffer from reduced liquidity in these or other situations.

Commercial paper in which an underlying fund may invest includes commercial paper issued in reliance on the exemption from registration afforded by Section 4(a)(2) of the 1933 Act. Section 4(a)(2) commercial paper has substantially the same price and liquidity characteristics as commercial paper generally, except that the resale of Section 4(a)(2) commercial paper is limited to institutional investors who agree that they are purchasing the paper for investment purposes and not with a view to public distribution. Technically, such a restriction on resale renders Section 4(a)(2) commercial paper a restricted security under the 1933 Act. In practice, however, Section 4(a)(2) commercial paper typically

can be resold as easily as any other unrestricted security held by the fund. Accordingly, Section 4(a)(2) commercial paper has been generally determined to be liquid under procedures adopted by the underlying fund's board of trustees.

Investments in registered open-end investment companies and unit investment trusts – The underlying fund may not acquire securities of open-end investment companies or investment unit trusts registered under the Investment Company Act of 1940 in reliance on Section 12(d)(1)(F) or 12(d)(1)(G) of the Investment Company Act.

Affiliated investment companies – An underlying fund may purchase shares of another investment company managed by the investment adviser or its affiliates. The risks of owning another investment company are similar to the risks of investing directly in the securities in which that investment company invests. Investments in other investment companies could allow the underlying fund to obtain the benefits of a more diversified portfolio than might otherwise be available through direct investments in a particular asset class, and will subject the underlying fund to the risks associated with the particular asset class or asset classes in which an underlying fund invests. However, an investment company may not achieve its investment objective or execute its investment strategy effectively, which may adversely affect the underlying fund's performance. Any investment in another investment company will be consistent with the underlying fund's objective(s) and applicable regulatory limitations.

* * * * *

Washington Mutual Investors Fund and its investment policies – Washington Mutual Investors Fund has an Eligible List of investments considered appropriate for a prudent investor seeking opportunities for income and growth of principal consistent with common stock investing. Numerous criteria govern which securities may be included on the fund's Eligible List. Currently, those criteria include, for example: (a) a security shall be listed on the New York Stock Exchange ("NYSE") or meet the financial listing requirements of the NYSE (the applicable listing requirements are set forth in Section 1 of the Listed Company Manual of the NYSE); (b) most companies must have fully earned their dividends in at least four of the past five years (with the exception of certain banking institutions) and paid a dividend in at least eight of the past ten years; (c) issuing companies must meet both initial and ongoing market capitalization requirements; (d) the ratio of current assets to liabilities for most individual companies must be at least 1.5 to 1, or their bonds must be rated at least investment grade by Standard & Poor's Ratings Services; and (e) companies must not derive the majority of their revenues from alcohol or tobacco products. The investment adviser generates and maintains the Eligible List and selects the fund's investments exclusively from the issuers on the Eligible List.

Although the fund generally invests in U.S. companies, the fund may invest up to 10% of its assets in securities of certain companies domiciled outside the United States. The fund may also hold securities of companies domiciled outside the U.S. when such companies have merged with or otherwise acquired a company in which the fund held shares at the time of the merger.

It is believed that in applying the above disciplines and procedures, the fund makes available to pension and profit-sharing trustees and other fiduciaries a prudent stock investment and a continuity of investment quality which it has always been the policy of the fund to provide. However, fiduciary investment responsibility and the Prudent Investor Rule, pursuant to which a fiduciary is generally required to invest and manage trust assets as a prudent investor would, involve a mixed question of law and fact which cannot be conclusively determined in advance. Moreover, recent changes to the Prudent Investor Rule in some jurisdictions speak to an allocation of funds among a variety of investments. Therefore, each fiduciary should examine the common stock portfolio of the fund to see that it, along with other investments, meets the requirements of the specific trust.

Portfolio turnover – Higher portfolio turnover may involve correspondingly greater transaction costs in the form of dealer spreads or brokerage commissions. It may also result in the realization of net capital gains, which are taxable when distributed to shareholders, unless the shareholder is exempt from taxation or his or her account is tax-favored.

A fund’s portfolio turnover rate would equal 100% if each security in the fund’s portfolio was replaced once per year. The following table sets forth the portfolio turnover rates for each fund for the fiscal years ended December 31, 2020 and 2019:

	Fiscal year	Portfolio turnover rate*
Managed Risk Growth Fund	2020	80%
	2019	10
Managed Risk International Fund	2020	71
	2019	8
Managed Risk Washington Mutual Investors Fund	2020	101
	2019	13
Managed Risk Growth-Income Fund	2020	38
	2019	6
Managed Risk Asset Allocation Fund	2020	30
	2019	8

* Increases (or decreases) in turnover were due to increased (or decreased) trading activity during the period.

See “Financial highlights” in the prospectus for the annual portfolio turnover rates for each of the last five fiscal years.

Fund policies

All percentage limitations in the following fund policies are considered at the time securities are purchased and are based on the fund's net assets unless otherwise indicated. None of the following policies involving a maximum percentage of assets will be considered violated unless the excess occurs immediately after, and is caused by, an acquisition by the fund. In managing the fund, the fund's investment adviser may apply more restrictive policies than those listed below.

Fundamental policies – The Series has adopted the following policies, which may not be changed without approval by holders of a majority of its outstanding shares. Such majority is currently defined in the Investment Company Act of 1940, as amended (the "1940 Act"), as the vote of the lesser of (a) 67% or more of the voting securities present at a shareholder meeting, if the holders of more than 50% of the outstanding voting securities are present in person or by proxy, or (b) more than 50% of the outstanding voting securities.

Except where the context indicates otherwise, the following policies apply to each fund in the Series (please also see "Additional information about fundamental policies" below):

1. Except as permitted by (i) the 1940 Act and the rules and regulations thereunder, or other successor law governing the regulation of registered investment companies, or interpretations or modifications thereof by the U.S. Securities and Exchange Commission ("SEC"), SEC staff or other authority of competent jurisdiction, or (ii) exemptive or other relief or permission from the SEC, SEC staff or other authority of competent jurisdiction, the fund may not:

- a. Borrow money;
- b. Issue senior securities;
- c. Underwrite the securities of other issuers;
- d. Purchase or sell real estate or commodities;
- e. Make loans; or
- f. Purchase the securities of any issuer if, as a result of such purchase, the fund's investments would be concentrated in any particular industry.

2. The fund may not invest in companies for the purpose of exercising control or management.

3. For Managed Risk Washington Mutual Investors Fund, the fund may not invest more than 5% of net assets in money market instruments, after allowing for sales of portfolio securities and fund shares within 30 days and the accumulation of cash balances representing undistributed net investment income and realized capital gains, in order to maintain a fully invested portfolio.

Additional information about fundamental policies – The information below is not part of the Series' fundamental policies. This information is intended to provide a summary of what is currently required or permitted by the 1940 Act and the rules and regulations thereunder, or by the interpretive guidance thereof by the SEC or SEC staff, for particular fundamental policies of the Series. Information is also provided regarding the fund's current intention with respect to certain investment practices permitted by the 1940 Act.

For purposes of fundamental policy 1a, the fund may borrow money in amounts of up to 33-1/3% of its total assets from banks for any purpose. Additionally, the fund may borrow up to 5% of its total assets from banks or other lenders for temporary purposes (a loan is presumed to be for temporary purposes if it is repaid within 60 days and is not extended or renewed). The percentage limitations in this policy are considered at the time of borrowing and thereafter.

For purposes of fundamental policy 1b, a senior security does not include any promissory note or evidence of indebtedness if such loan is for temporary purposes only and in an amount not exceeding 5% of the value of the total assets of the fund at the time the loan is made (a loan is presumed to be for temporary purposes if it is repaid within 60 days and is not extended or renewed). Further, to the extent the fund covers its commitments under certain types of agreements and transactions, including short positions in financial instruments, mortgage-dollar-roll transactions, sale-buybacks, when-issued, delayed-delivery, or forward commitment transactions, and other similar trading practices, by segregating or earmarking liquid assets equal in value to the amount of the fund's commitment (in accordance with applicable SEC or SEC staff guidance), such agreement or transaction will not be considered a senior security by the fund.

For purposes of fundamental policy 1c, the policy will not apply to the fund to the extent the fund may be deemed an underwriter within the meaning of the 1933 Act in connection with the purchase and sale of fund portfolio securities in the ordinary course of pursuing its investment objectives and strategies.

For purposes of fundamental policy 1e, the fund may not lend more than 33-1/3% of its total assets, provided that this limitation shall not apply to the fund's purchase of debt obligations, money market instruments and repurchase agreements.

For purposes of fundamental policy 1f, the fund may not invest more than 25% of its total assets in the securities of issuers in a particular industry. For purposes of calculating compliance with restrictions on industry concentrations, the fund will look through to the securities held by the underlying fund in which it invests. This policy does not apply to investments in securities of the United States government, its agencies or instrumentalities or government sponsored entities or repurchase agreements with respect thereto. The fund does not consider the futures or options contracts in which it currently invests - namely, futures and options on broad-based equity indices - to be an industry for these purposes. The fund may, however, invest substantially all of its assets in one or more investment companies managed by Capital Research and Management Company.

For purposes of fundamental policy 3, money market instruments include one or more money market or similar funds managed by the investment adviser or its affiliates.

Management of the Series

Board of trustees and officers

Independent trustees¹

The Series' nominating and governance committee and board select independent trustees with a view toward constituting a board that, as a body, possesses the qualifications, skills, attributes and experience to appropriately oversee the actions of the Series' service providers, decide upon matters of general policy and represent the long-term interests of fund shareholders. In doing so, they consider the qualifications, skills, attributes and experience of the current board members, with a view toward maintaining a board that is diverse in viewpoint, experience, education and skills.

The Series seeks independent trustees who have high ethical standards and the highest levels of integrity and commitment, who have inquiring and independent minds, mature judgment, good communication skills, and other complementary personal qualifications and skills that enable them to function effectively in the context of the Series' board and committee structure and who have the ability and willingness to dedicate sufficient time to effectively fulfill their duties and responsibilities.

Each independent trustee has a significant record of accomplishments in governance, business, not-for-profit organizations, government service, academia, law, accounting or other professions. Although no single list could identify all experience upon which the Series' independent trustees draw in connection with their service, the following table summarizes key experience for each independent trustee. These references to the qualifications, attributes and skills of the trustees are pursuant to the disclosure requirements of the SEC, and shall not be deemed to impose any greater responsibility or liability on any trustee or the board as a whole. Notwithstanding the accomplishments listed below, none of the independent trustees is considered an "expert" within the meaning of the federal securities laws with respect to information in the Series' registration statement.

Interested trustee(s)^{4,5}

Interested trustees have similar qualifications, skills and attributes as the independent trustees. Interested trustees are senior executive officers and/or directors of Capital Research and Management Company or its affiliates. Such management roles with the Series' service providers also permit the interested trustees to make a significant contribution to the Series' board.

Name, year of birth and position with Series (year first elected as a trustee ²)	Principal occupation(s) during the past five years and positions held with affiliated entities or the Principal Underwriter of the Series during the past five years	Number of portfolios in fund complex overseen by trustee	Other directorships ³ held by trustee during the past five years
Donald D. O'Neal, 1960 Co-President and Trustee (1998)	Partner - Capital International Investors, Capital Research and Management Company; Partner - Capital International Investors, Capital Bank and Trust Company*	35	None
Michael C. Gitlin, 1970 Trustee (2019)	Partner - Capital Fixed Income Investors, Capital Research and Management Company; Vice Chairman and Director, Capital Research and Management Company; Director, The Capital Group Companies, Inc.*; served as Head of Fixed Income at a large investment management firm prior to joining Capital Research and Management Company in 2015	87	None

Sandra Chuon, 1972 Assistant Treasurer (2019)	Assistant Vice President - Investment Operations, Capital Research and Management Company
Brian C. Janssen, 1972 Assistant Treasurer (2015)	Senior Vice President - Investment Operations, Capital Research and Management Company

* Company affiliated with Capital Research and Management Company.

¹ The term independent trustee refers to a trustee who is not an "interested person" of the funds within the meaning of the 1940 Act.

² Trustees and officers of the Series serve until their resignation, removal or retirement.

³ This includes all directorships/trusteeships (other than those in the American Funds or other funds managed by Capital Research and Management Company or its affiliates) that are held by each trustee as a director/trustee of a public company or a registered investment company. Unless otherwise noted, all directorships/trusteeships are current.

⁴ The term interested trustee refers to a trustee who is an "interested person" of the funds within the meaning of the 1940 Act, on the basis of his or her affiliation with the Series' investment adviser, Capital Research and Management Company, or affiliated entities.

⁵ All of the trustees and/or officers listed, with the exception of Martin Jacobs and Keiko McKibben, are officers and/or directors/trustees of one or more of the other funds for which Capital Research and Management Company serves as investment adviser.

The address for all trustees and officers of the Series is 333 South Hope Street, 55th Floor, Los Angeles, California 90071, Attention: Secretary.

Fund shares owned by trustees as of December 31, 2020:

Margaret Spellings	None	Over \$100,000	N/A ⁵	Over \$100,000
Alexandra Trower	None	Over \$100,000	N/A ⁵	Over \$100,000
Paul S. Williams	None	Over \$100,000	N/A ⁵	\$50,001 - \$100,000

Name	Dollar range^{1,2} of fund shares owned	Aggregate dollar range¹ of shares owned in all funds in the American Funds family overseen by trustee
Interested trustees		
Donald D. O'Neal	None	None
Michael C. Gitlin	None	Over \$100,000

¹ Ownership disclosure is made using the following ranges: None; \$1 - \$10,000; \$10,001 - \$50,000; \$50,001 - \$100,000; and Over \$100,000. The amounts listed for interested trustees include shares owned through The Capital Group Companies, Inc. retirement plan and 401(k) plan.

² N/A indicates that the listed individual, as of December 31, 2020, was not a trustee of a particular fund, did not allocate deferred compensation to the fund or did not participate in the deferred compensation plan.

³ Shares of the funds may only be owned by purchasing variable annuity and variable life insurance contracts. Each trustee's need for variable annuity or variable life contracts and the role those contracts would play in his or her comprehensive investment portfolio will vary and depend on a number of factors including tax, estate planning, life insurance, alternative retirement plans or other considerations.

⁴ Eligible trustees may defer their compensation under a nonqualified deferred compensation plan. Amounts deferred by the trustee accumulate at an earnings rate determined by the total return of one or more American Funds as designated by the trustee.

⁵ The funds in the Series are not available for investment in the independent trustees deferred compensation plan.

⁶ Dr. Cigarroa was elected to the board effective January 2, 2021.

Trustee compensation – No compensation is paid by the Series to any officer or trustee who is a director, officer or employee of the investment adviser or its affiliates. Except for the independent trustees listed in the “Board of trustees and officers – Independent trustees” table under the “Management of the Series” section in this statement of additional information, all other officers and trustees of the Series are directors, officers or employees of the investment adviser or its affiliates. The boards of funds advised by the investment adviser typically meet either individually or jointly with the boards of one or more other such funds with substantially overlapping board membership (in each case referred to as a “board cluster”). The Series typically pays each independent trustee an annual retainer fee based primarily on the total number of board clusters on which that independent trustee serves.

In addition, the Series generally pays independent trustees attendance and other fees for meetings of the board and its committees. The board chair receives an additional fee for this service.

Independent trustees also receive attendance fees for certain special joint meetings and information sessions with directors and trustees of other groupings of funds advised by the investment adviser. The Series and the other funds served by each independent trustee each pay a portion of these attendance fees.

No pension or retirement benefits are accrued as part of Series expenses. Independent trustees may elect, on a voluntary basis, to defer all or a portion of their fees through a deferred compensation plan in effect for the Series. The Series also reimburses certain expenses of the independent trustees.

Trustee compensation earned during the fiscal year ended December 31, 2020:

Name	Aggregate compensation (including voluntarily deferred compensation¹) from the series	Total compensation (including voluntarily deferred compensation¹) from all funds managed by Capital Research and Management Company or its affiliates
William H. Baribault ² (retired December 31, 2020)	\$48,805	\$410,000
Francisco G. Cigarroa (service began January 2, 2021)	N/A	N/A
James G. Ellis	51,681	505,000
Nariman Farvardin ²	48,521	397,000
Mary Davis Holt	50,893	378,000
R. Clark Hooper ²	43,677	431,676
Merit E. Janow	50,426	371,500
Margaret Spellings ²	52,991	503,476
Alexandra Trower ²	57,963	276,000
Paul S. Williams ² (service began January 2, 2020)	67,013	321,000

¹ Amounts may be deferred by eligible trustees under a nonqualified deferred compensation plan adopted by the Series in 1993. Deferred amounts accumulate at an earnings rate determined by the total return of one or more American Funds as designated by the trustees. Compensation shown in this table for the fiscal year ended December 31, 2020 does not include earnings on amounts deferred in previous fiscal years. See footnote 2 to this table for more information.

² Since the deferred compensation plan's adoption, the total amount of deferred compensation accrued by the Series (plus earnings thereon) through the end of the 2020 fiscal year for participating trustees is as follows: William H. Baribault (\$186,853), Nariman Farvardin (\$253,177), R. Clark Hooper (\$148,639), Margaret Spellings (\$292,809), Alexandra Trower (\$311,603) and Paul S. Williams (\$24,326). Amounts deferred and accumulated earnings thereon are not funded and are general unsecured liabilities of the Series until paid to the trustees.

Series organization and the board of trustees – The Series, an open-end investment company, was organized as a Massachusetts business trust on September 13, 1983. At a meeting of the Series' shareholders on November 24, 2009, shareholders approved the reorganization of the Series to a Delaware statutory trust. However, the Series reserved the right to delay implementing the reorganization and has elected to do so. A summary comparison of the governing documents and state laws affecting the Delaware statutory trust and the current form of organization of the Series can be found in the proxy statement for the Series dated August 28, 2009, which is available on the SEC's website at sec.gov.

All Series operations are supervised by its board of trustees, which meets periodically and performs duties required by applicable state and federal laws. Independent board members are paid certain fees for services rendered to the Series as described above. They may elect to defer all or a portion of these fees through a deferred compensation plan in effect for the Series.

Massachusetts common law provides that a trustee of a Massachusetts business trust owes a fiduciary duty to the trust and must carry out his or her responsibilities as a trustee in accordance with that fiduciary duty. Generally, a trustee will satisfy his or her duties if he or she acts in good faith and uses ordinary prudence.

The Series currently consists of separate funds which have separate assets and liabilities, and invest in separate investment portfolios. The board of trustees may create additional funds in the future. Income, direct liabilities and direct operating expenses of a fund will be allocated directly to that fund and general liabilities and expenses of the Series will be allocated among the funds in proportion to the total net assets of each fund.

The funds have Class P1 and Class P2 shares. Other funds in the Series have Class 1, Class 1A, Class 2, Class 3 and/or Class 4 shares. The shares of each class represent an interest in the same investment portfolio. Each class has equal rights as to voting, redemption, dividends and liquidation, except that each class bears different distribution expenses and other expenses properly attributable to the particular class as approved by the board of trustees and set forth in the Series' amended and restated rule 18f-3 Plan. Class P1 and P2 shareholders have exclusive voting rights with respect to their respective rule 12b-1 Plan adopted in connection with the distribution of Class P1 and P2. Class P1 and Class P2 shareholders have exclusive voting rights with respect to their respective Insurance Administrative Services Plans. Shares of each class of the Series vote together on matters that affect all classes in substantially the same manner. Each class votes as a class on matters that affect that class alone.

The Series does not hold annual meetings of shareholders. However, significant matters that require shareholder approval, such as certain elections of board members or a change in a fundamental investment policy, will be presented to shareholders at a meeting called for such purpose. Shareholders have one vote per share owned. At the request of the holders of at least 10% of the shares, the Series will hold a meeting at which any member of the board could be removed by a majority vote.

The Series' declaration of trust and by-laws, as well as separate indemnification agreements that the Series has entered into with independent trustees, provide in effect that, subject to certain conditions, the Series will indemnify its officers and trustees against liabilities or expenses actually and reasonably incurred by them relating to their service to the Series. However, trustees are not protected from liability by reason of their willful misfeasance, bad faith, gross negligence or reckless disregard of the duties involved in the conduct of their office.

Leadership structure – The board’s chair is currently an independent trustee who is not an “interested person” of the Series within the meaning of the 1940 Act. The board has determined that an independent chair facilitates oversight and enhances the effectiveness of the board. The independent chair’s duties include, without limitation, generally presiding at meetings of the board, approving board meeting schedules and agendas, leading meetings of the independent trustees in executive session, facilitating communication with committee chairs, and serving as the principal independent trustee contact for Series management and independent counsel to the trustees and the fund.

Risk oversight – Day-to-day management of the Series, including risk management, is the responsibility of the Series’ contractual service providers, including the Series’ investment adviser, principal underwriter/distributor, transfer agent and subadviser. Each of these entities is responsible for specific portions of the Series’ operations, including the processes and associated risks relating to the fund’s investments, integrity of cash movements, financial reporting, operations and compliance. The board of trustees oversees the service providers’ discharge of their responsibilities, including the processes they use. In that regard, the board receives reports regarding the operations of the Series’ service providers, including risks. For example, the board receives reports from investment professionals regarding risks related to the fund’s investments and trading. The board also receives compliance reports from the Series and the investment adviser’s chief compliance officers addressing certain areas of risk.

Committees of the Series board, which are comprised of independent board members, none of whom is an “interested person” of the fund within the meaning of the 1940 Act, as well as joint committees of independent board members of funds managed by Capital Research and Management Company, also explore risk management procedures in particular areas and then report back to the full board. For example, the Series’ audit committee oversees the processes and certain attendant risks relating to financial reporting, valuation of fund assets, and related controls. Similarly, a joint review and advisory committee oversees certain risk controls relating to the fund’s transfer agency services.

Not all risks that may affect the Series can be identified or processes and controls developed to eliminate or mitigate their effect. Moreover, it is necessary to bear certain risks (such as investment-related risks) to achieve each fund’s objectives. As a result of the foregoing and other factors, the ability of the Series’ service providers to eliminate or mitigate risks is subject to limitations.

Committees of the board of trustees – The Series has an audit committee comprised of Francisco G. Cigarroa, James G. Ellis, Mary Davis Holt and Paul S. Williams. The committee provides oversight regarding the Series’ accounting and financial reporting policies and practices, its internal controls and the internal controls of the Series’ principal service providers. The committee acts as a liaison between the Series’ independent registered public accounting firm and the full board of trustees. The audit committee held five meetings during the 2020 fiscal year.

The Series has a contracts committee comprised of all of its independent board members. The committee’s principal function is to request, review and consider the information deemed necessary to evaluate the terms of certain agreements between the Series and its investment adviser or the investment adviser’s affiliates, such as the Investment Advisory and Service Agreement and plan of distribution adopted pursuant to rule 12b-1 under the 1940 Act, that the Series may enter into, renew or continue, and to make its recommendations to the full board of trustees on these matters. The contracts committee held one meeting during the 2020 fiscal year.

The Series has a nominating and governance committee comprised of Nariman Farvardin, R. Clark Hooper, Merit E. Janow, Margaret Spellings and Alexandra Trower. The committee periodically reviews such issues as the board’s composition, responsibilities, committees, compensation and other relevant issues, and recommends any appropriate changes to the full board of trustees. The committee also coordinates annual self-assessments of the board and evaluates, selects and

nominates independent trustee candidates to the full board of trustees. While the committee normally is able to identify from its own and other resources an ample number of qualified candidates, it will consider shareholder suggestions of persons to be considered as nominees to fill future vacancies on the board. Such suggestions must be sent in writing to the nominating and governance committee of the Series, addressed to the Series' secretary, and must be accompanied by complete biographical and occupational data on the prospective nominee, along with a written consent of the prospective nominee for consideration of his or her name by the committee. The nominating and governance committee held two meetings during the 2020 fiscal year.

The independent board members of the Series have oversight responsibility for the Series and certain other funds managed by the investment adviser. As part of their oversight responsibility for these funds, each independent board member sits on one of three fund review committees comprised solely of independent board members. The three committees are divided by portfolio type. Each committee functions independently and is not a decision making body. The purpose of the committees is to assist the board of the Series in the oversight of the investment management services provided by the investment adviser. In addition to regularly monitoring and reviewing investment results, investment activities and strategies used to manage the funds' assets, the committees also receive reports from the investment adviser's Principal Investment Officers for the funds, portfolio managers and other investment personnel concerning efforts to achieve the funds' investment objectives. Each committee reports to the full board of the Series.

Proxy voting procedures and principles – The funds' investment adviser, in consultation with the Series' board, has adopted Proxy Voting Procedures and Principles (the "Principles") with respect to voting proxies of securities held by the funds and other American Funds. The complete text of these principles is available at capitalgroup.com. Proxies are voted by a committee of the appropriate equity investment division of the investment adviser under authority delegated by the Series' board. Therefore, if more than one fund invests in the same company, they may vote differently on the same proposal. The boards of American Funds have established a Joint Proxy Committee ("JPC") composed of independent board members from each American Funds board. The JPC's role is to facilitate appropriate oversight of the proxy voting process and provide valuable input on corporate governance and related matters.

The Principles, which have been in effect in substantially their current form for many years, provide an important framework for analysis and decision-making by all funds. However, they are not exhaustive and do not address all potential issues. The Principles provide a certain amount of flexibility so that all relevant facts and circumstances can be considered in connection with every vote. As a result, each proxy received is voted on a case-by-case basis considering the specific circumstances of each proposal. The voting process reflects the funds' understanding of the company's business, its management and its relationship with shareholders over time.

The investment adviser seeks to vote all U.S. proxies; however, in certain circumstances it may be impracticable or impossible to do so. Proxies for companies outside the U.S. also are voted, provided there is sufficient time and information available. Certain regulators have granted investment limit relief to the investment adviser and its affiliates, conditioned upon limiting its voting power to specific voting ceilings. To comply with these voting ceilings, the investment adviser will scale back its votes across all funds and clients on a pro-rata basis based on assets. After a proxy statement is received, the investment adviser prepares a summary of the proposals contained in the proxy statement. A notation of any potential conflicts of interest also is included in the summary (see below for a description of Capital Research and Management Company's special review procedures).

For proxies of securities managed by a particular equity investment division of the investment adviser, the initial voting recommendation is made by one or more of the division's investment analysts familiar with the company and industry. A second recommendation is made by a proxy coordinator (an investment analyst or other individual with experience in corporate governance and proxy voting

matters) within the appropriate investment division, based on knowledge of these Principles and familiarity with proxy-related issues. The proxy summary and voting recommendations are made available to the appropriate proxy voting committee for a final voting decision. In cases where a fund is co-managed and a security is held by more than one of the investment adviser's equity investment divisions, the divisions may develop different voting recommendations for individual ballot proposals. If this occurs, and if permitted by local market conventions, the fund's position will generally be voted proportionally by divisional holding, according to their respective decisions. Otherwise, the outcome will be determined by the equity investment division or divisions with the larger position in the security as of the record date for the shareholder meeting.

In addition to our proprietary proxy voting, governance and executive compensation research, Capital Research and Management Company may utilize research provided by Institutional Shareholder Services, Glass-Lewis & Co. or other third-party advisory firms on a case-by-case basis. It does not, as a policy, follow the voting recommendations provided by these firms. It periodically assesses the information provided by the advisory firms and reports to the JPC, as appropriate.

From time to time the investment adviser may vote proxies issued by, or on proposals sponsored or publicly supported by (a) a client with substantial assets managed by the investment adviser or its affiliates, (b) an entity with a significant business relationship with Capital Group, or (c) a company with a director of an American Funds on its board (each referred to as an "Interested Party"). Other persons or entities may also be deemed an Interested Party if facts or circumstances appear to give rise to a potential conflict. The investment adviser analyzes these proxies and proposals on their merits and does not consider these relationships when casting its vote.

The investment adviser has developed procedures to identify and address instances where a vote could appear to be influenced by such a relationship. Under the procedures, prior to a final vote being cast by the investment adviser, the relevant proxy committees' voting results for proxies issued by Interested Parties are reviewed by a Special Review Committee ("SRC") of the investment division voting the proxy if the vote was in favor of the Interested Party.

If a potential conflict is identified according to the procedure above, the SRC will be provided with a summary of any relevant communications with the Interested Party, the rationale for the voting decision, information on the organization's relationship with the party and any other pertinent information. The SRC will evaluate the information and determine whether the decision was in the best interest of fund shareholders. It will then accept or override the voting decision or determine alternative action. The SRC includes senior investment professionals and legal and compliance professionals.

Information regarding how the funds voted proxies relating to portfolio securities during the 12-month period ended June 30 of each year will be available on or about September 1 of such year (a) without charge, upon request by calling American Funds Service Company at (800) 421-4225, (b) on the Capital Group website and (c) on the SEC's website at sec.gov.

The following summary sets forth the general positions of American Funds, the Series and the investment adviser on various proposals. A copy of the full Principles is available upon request, free of charge, by calling American Funds Service Company or visiting the Capital Group website.

Director matters – The election of a company's slate of nominees for director generally is supported. Votes may be withheld for some or all of the nominees if this is determined to be in the best interest of shareholders or if, in the opinion of the investment adviser, such nominee has not fulfilled his or her fiduciary duty. Separation of the chairman and CEO positions also may be supported.

Governance provisions – Typically, proposals to declassify a board (elect all directors annually) are supported based on the belief that this increases the directors’ sense of accountability to shareholders. Proposals for cumulative voting generally are supported in order to promote management and board accountability and an opportunity for leadership change. Proposals designed to make director elections more meaningful, either by requiring a majority vote or by requiring any director receiving more withhold votes than affirmative votes to tender his or her resignation, generally are supported.

Shareholder rights – Proposals to repeal an existing poison pill generally are supported. (There may be certain circumstances, however, when a proxy voting committee of a fund or an investment division of the investment adviser believes that a company needs to maintain anti-takeover protection.) Proposals to eliminate the right of shareholders to act by written consent or to take away a shareholder’s right to call a special meeting typically are not supported.

Compensation and benefit plans – Option plans are complicated, and many factors are considered in evaluating a plan. Each plan is evaluated based on protecting shareholder interests and a knowledge of the company and its management. Considerations include the pricing (or repricing) of options awarded under the plan and the impact of dilution on existing shareholders from past and future equity awards. Compensation packages should be structured to attract, motivate and retain existing employees and qualified directors; however, they should not be excessive.

Routine matters – The ratification of auditors, procedural matters relating to the annual meeting and changes to company name are examples of items considered routine. Such items generally are voted in favor of management’s recommendations unless circumstances indicate otherwise.

Principal fund shareholders – The following table identifies those investors who own of record, or are known by the Series to own beneficially, 5% or more of any class of a fund’s shares as of the opening of business on April 1, 2021. Unless otherwise indicated, the ownership percentages below represent ownership of record rather than beneficial ownership.

As of April 1, 2021, the officers and trustees of the Series, as a group, owned beneficially or of record less than 1% of the outstanding shares of each fund.

Investment adviser – Capital Research and Management Company, the Series' investment adviser, founded in 1931, maintains research facilities in the United States and abroad (Beijing, Geneva, Hong Kong, London, Los Angeles, Mumbai, New York, San Francisco, Singapore, Tokyo and Washington, D.C.). These facilities are staffed with experienced investment professionals. The investment adviser is located at 333 South Hope Street, Los Angeles, CA 90071. It is a wholly owned subsidiary of The Capital Group Companies, Inc., a holding company for several investment management subsidiaries. Capital Research and Management Company manages equity assets through three equity investment divisions and fixed income assets through its fixed income investment division, Capital Fixed Income Investors. The three equity investment divisions – Capital World Investors, Capital Research Global Investors and Capital International Investors – make investment decisions independently of one another. Portfolio managers in Capital International Investors rely on a research team that also provides investment services to institutional clients and other accounts advised by affiliates of Capital Research and Management Company.

The investment adviser has adopted policies and procedures that address issues that may arise as a result of an investment professional's management of the fund and other funds and accounts. Potential issues could involve allocation of investment opportunities and trades among funds and accounts, use of information regarding the timing of fund trades, investment professional compensation and voting relating to portfolio securities. The investment adviser believes that its policies and procedures are reasonably designed to address these issues.

The investment adviser has designed policies and procedures reasonably designed to ensure that the subadviser complies with the fund's investment objective, strategies and restrictions and provides oversight and monitoring of the subadviser's activities and compliance procedures.

Subadviser – Milliman Financial Risk Management LLC is the subadviser to the fund with respect to the managed risk strategy. Milliman Financial Risk Management LLC is a wholly owned subsidiary of Milliman, Inc. and is located at 71 South Wacker Drive, 31st Floor, Chicago, IL 60606.

Compensation of investment professionals – Portfolio managers and investment analysts of the investment adviser are paid competitive salaries by Capital Research and Management Company. In addition, they may receive bonuses based on their individual portfolio results for the underlying fund in which the fund invests, as well as qualitative considerations, such as an individual's contribution to the organization, which would include service as a portfolio manager to the fund. Investment professionals also may participate in profit-sharing plans. The relative mix of compensation represented by bonuses, salary and profit-sharing plans will vary depending on the individual's portfolio results, contributions to the organization and other factors.

Portfolio managers of the subadviser are paid competitive salaries by Milliman Financial Risk Management LLC. In addition, they may receive bonuses based on qualitative considerations, such as an individual's contribution to the organization, and performance reviews in relation to job responsibilities. Investment professionals also may participate in profit-sharing plans. The relative mix of compensation represented by bonuses, salary and profit-sharing plans will vary depending on the individual's contributions to the organization and other factors.

Portfolio manager fund holdings and management of other accounts – Shares of the fund may only be owned by purchasing variable annuity and variable life insurance contracts. Each portfolio manager’s need for variable annuity or variable life insurance contracts and the role those contracts would play in his or her comprehensive investment portfolio will vary and depend on a number of factors including tax, estate planning, life insurance, alternative retirement plans or other considerations. The portfolio managers have determined that variable insurance or annuity contracts do not meet their current needs. Consequently, they do not hold shares of the funds.

Portfolio managers may also manage assets in other funds advised by Capital Research and Management Company or its affiliates. Other managed accounts as of the end of the Series’ most recently completed fiscal year are listed as follows:

The following tables reflect information as of December 31, 2020:

Portfolio manager/ Investment professional	Number of other registered investment companies (RICs) for which portfolio manager or investment professional manages (assets of RICs in billions) ¹	Number of other pooled investment vehicles (PIVs) for which portfolio manager or investment professional manages (assets of PIVs in billions) ¹	Number of other accounts for which portfolio manager or investment professional manages (assets of other accounts in billions) ^{1,2}		
Managed Risk Growth Fund					
Alan N. Berro	24	\$427.1	2	\$0.96	None
Managed Risk International Fund					
Alan N. Berro	24	\$427.5	2	\$0.96	None
Managed Risk Washington Mutual Investors Fund					
Alan N. Berro	24	\$427.3	2	\$0.96	None
Managed Risk Growth-Income Fund					
Alan N. Berro	24	\$425.3	2	\$0.96	None
Managed Risk Asset Allocation Fund					
Alan N. Berro	24	\$424.9	2	\$0.96	None

¹ Indicates other RIC(s), PIV(s) or other accounts managed by Capital Research and Management Company or its affiliates for which the portfolio manager also has significant day to day management responsibilities. Assets noted are the total net assets of the RIC(s), PIV(s) or other accounts and are not the total assets managed by the individual, which is a substantially lower amount. No RIC, PIV or other account has an advisory fee that is based on the performance of the RIC, PIV or other account, unless otherwise noted.

² Personal brokerage accounts of portfolio managers and their families are not reflected.

Portfolio manager	Number of other registered investment companies (RICs) for which portfolio manager is a manager (assets of RICs in billions)	Number of other pooled investment vehicles (PIVs) for which portfolio manager is a manager (assets of PIVs in billions)	Number of other accounts for which portfolio manager is a manager (assets of other accounts in billions)
Jeff Greco	11 \$25.2	None	None
Adam Schenck	32 \$39.7	3 \$0.37	None
Maria Schiopu	17 \$12.3	None	None

The fund's investment adviser has adopted policies and procedures to mitigate material conflicts of interest that may arise in connection with a portfolio manager's management of the fund, on the one hand, and investments in the other pooled investment vehicles and other accounts, on the other hand, such as material conflicts relating to the allocation of investment opportunities that may be suitable for both the fund and such other accounts.

Investment Advisory and Service Agreement – The Investment Advisory and Service Agreement (the “Agreement”) between the Series and the investment adviser will continue in effect until April 30, 2022, unless sooner terminated, and may be renewed from year to year thereafter, provided that any such renewal has been specifically approved at least annually by (a) the board of trustees, or by the vote of a majority (as defined in the 1940 Act) of the outstanding voting securities of the applicable Series, and (b) the vote of a majority of trustees who are not parties to the Agreement or interested persons (as defined in the 1940 Act) of any such party, as required by applicable law. The Agreement provides that the investment adviser has no liability to the Series for its acts or omissions in the performance of its obligations to the Series not involving willful misconduct, bad faith, gross negligence or reckless disregard of its obligations under the Agreement. The Agreement also provides that either party has the right to terminate it, without penalty, upon 60 days’ written notice to the other party, and that the Agreement automatically terminates in the event of its assignment (as defined in the 1940 Act). In addition, the Agreement provides that the investment adviser may delegate all, or a portion of, its investment management responsibilities to one or more subadvisers approved by the Series’ board and the shareholders of each applicable fund. Any such subadviser will be paid solely by the investment adviser out of the investment adviser’s fees.

In addition to providing investment advisory services, the investment adviser furnishes the services and pays the compensation and travel expenses of qualified persons to perform the executive and related administrative functions of the Series, and provides necessary office space, office equipment and utilities, and general purpose accounting forms, supplies and postage used at the office of the Series relating to the services furnished by the investment adviser. Subject to the expense agreement described below, the Series will pay all expenses not expressly assumed by the investment adviser, including, but not limited to: registration and filing fees of federal and state agencies; blue sky expenses (if any); expenses of shareholders’ meetings; the expense of reports to existing shareholders; expenses of printing proxies and prospectuses; insurance premiums; legal and auditing fees; fund accounting fees; dividend disbursement expenses; the expense of the issuance, transfer and redemption of its shares; custodian fees; printing and preparation of registration statements; taxes; compensation, fees and expenses paid to trustees unaffiliated with the investment adviser; association dues; and costs of stationary and forms prepared exclusively for the Series.

For the fiscal years ended December 31, 2020, 2019 and 2018, the investment adviser earned from the fund management fees. The investment adviser is currently waiving a portion of its investment advisory services fees for each share class of the fund, such that the fees which were equivalent to an annualized rate of .15% of average daily net assets are reduced to .10% of average daily net assets. This waiver may only be modified or terminated with the approval of the Series' board. After giving effect to the fee waiver described above, each fund paid the following investment advisory services fees:

Fund	Fiscal year	Gross management fee	Waiver	Net management fee
Managed Risk Growth Fund	2020	\$719,000	\$ 240,000	\$479,000
	2019	590,000	197,000	393,000
	2018	486,000	162,000	324,000
Managed Risk International Fund	2020	235,000	79,000	156,000
	2019	239,000	80,000	159,000
	2018	234,000	78,000	156,000
Managed Risk Washington Mutual Investors Fund	2020	518,000	173,000	345,000
	2019	527,000	176,000	351,000
	2018	530,000	177,000	353,000
Managed Risk Growth-Income Fund	2020	3,378,000	1,126,000	2,252,000
	2019	3,162,000	1,054,000	2,108,000
	2018	439,000	146,000	293,000
Managed Risk Asset Allocation Fund	2020	4,028,000	1,342,000	2,686,000
	2019	4,046,000	1,349,000	2,697,000
	2018	6,609,000	2,203,000	4,406,000

The investment adviser is currently reimbursing a portion of the expenses of Class P1 and P2 shares for Managed Risk International Fund. These reimbursements will be in effect through at least May 1, 2022. The adviser may elect at its discretion to extend, modify or terminate the reimbursements at that time. For fiscal years ended December 31, 2020, 2019 and 2018, the total expenses reimbursed by the investment adviser were \$41,000, \$74,000 and \$92,000, respectively. The amount for 2018 has been adjusted to reflect the actual amount reimbursed, due to over accruals from prior years.

The investment adviser has entered into a contract with the subadviser with respect to each fund and compensates the subadviser out of the investment advisory fees it receives from each fund. The subadviser's total fees for services provided to the Series for the fiscal years ended 2020, 2019 and 2018, were:

Fund	Fiscal year	Subadviser fee
Managed Risk Growth Fund	2020	\$479,000
	2019	393,000
	2018	324,000
Managed Risk International Fund	2020	156,000
	2019	159,000
	2018	156,000
Managed Risk Washington Mutual Investors Fund	2020	345,000
	2019	351,000
	2018	353,000
Managed Risk Growth-Income Fund	2020	2,252,000
	2019	2,108,000
	2018	293,000
Managed Risk Asset Allocation Fund	2020	2,686,000
	2019	2,697,000
	2018	4,406,000

Since the fund pursues its investment objective in part by investing in the underlying fund, you will bear your proportionate share of the fund's operating expenses and also, indirectly, the operating expenses of the underlying fund.

Sub-Advisory Agreement – The subadviser is appointed by the Series and the investment adviser, and provides services, pursuant to a Sub-Advisory Agreement. The Sub-Advisory Agreement between the investment adviser, the Series and the subadviser will continue in effect until April 30, 2022, unless sooner terminated, and may be renewed from year to year thereafter, provided that any such renewal has been specifically approved at least annually by (a) the board of trustees, or by the vote of a majority (as defined in the 1940 Act) of the outstanding voting securities of the applicable Series, and (b) the vote of a majority of trustees who are not parties to the Sub-Advisory Agreement or interested persons (as defined in the 1940 Act) of any such party, cast in person at a meeting called for the purpose of voting on such approval. The Sub-Advisory Agreement also provides that either party has the right to terminate it, without penalty, upon 60 days' written notice to the other party, and that the Sub-Advisory Agreement automatically terminates in the event of its assignment (as defined in the 1940 Act) or the assignment or termination of the Investment Advisory and Service Agreement. In addition, the Sub-Advisory Agreement provides that the subadviser will be paid solely by the investment adviser out of the investment adviser's fees.

Administrative services – The investment adviser and its affiliates provide certain administrative services for shareholders of the Series' Class P1 and P2 shares. Administrative services are provided by the investment adviser and its affiliates to help assist third parties providing non-distribution services to fund shareholders. These services include providing in-depth information on the fund and market developments that impact fund investments. Administrative services also include, but are not limited to, coordinating, monitoring and overseeing third parties that provide services to Series shareholders.

These services are provided pursuant to an Administrative Services Agreement (the "Administrative Agreement") between the Series and the investment adviser relating to the Series' Class P1 and P2 shares. The Administrative Agreement will continue in effect until April 30, 2022, unless sooner renewed or terminated, and may be renewed from year to year thereafter, provided that any such renewal has been specifically approved at least annually by the vote of a majority of the members of the Series' board who are not parties to the Administrative Agreement or interested persons (as defined in the 1940 Act) of any such party, cast in person (absent an exemption from this requirement), at a meeting called for the purpose of voting on such approval. The Series may terminate the Administrative Agreement at any time by vote of a majority of independent board members. The investment adviser has the right to terminate the Administrative Agreement upon 60 days' written notice to the Series. The Administrative Agreement automatically terminates in the event of its assignment (as defined in the 1940 Act).

The fund is not assessed an administrative services fee for administrative services provided under the Administrative Agreement. However, the investment adviser receives an administrative services fee at the annual rate of .03% of the average daily net assets from the Class 1 shares of the underlying funds (which could be increased as described in the current prospectus of the applicable underlying funds) for its provision of administrative services. Administrative services fees are paid monthly and accrued daily.

Plans of distribution – The Series has adopted plans of distribution (the "Plans") for its Class P1 and P2 shares, pursuant to rule 12b-1 under the 1940 Act. As required by rule 12b-1, the Plans have been approved by a majority of the entire board of trustees, and separately by a majority of the trustees who are not "interested persons" of the Series and who have no direct or indirect financial interest in the operation of the Plans. Potential benefits of the Plans to the Series include improved shareholder services, benefits to the investment process from growth or stability of assets and maintenance of a financially healthy management organization. The selection and nomination of trustees who are not "interested persons" of the Series is committed to the discretion of the trustees who are not "interested persons" during the existence of the Plans. The Plans are reviewed quarterly and must be renewed annually by the board of trustees.

Under the Plans, the Series may expend up to .25% of the assets of Class P1 shares and up to .50% of the assets of Class P2 shares. The board of trustees has authorized the Series to pay to insurance company contract issuers .25% of the fund's average net assets of Class P2 shares annually to finance any distribution activity which is primarily intended to benefit the Class P2 shares of the fund, provided that the board of trustees of the Series has approved the categories of expenses for which payment is being made. The board of trustees has not authorized any payments on Class P1 assets pursuant to the Plan for Class P1 shares. Payments made pursuant to the Plans will be used by insurance company contract issuers to pay a continuing annual service fee to dealers on the value of all variable annuity and variable life insurance contract payments for account-related services provided to existing shareholders. During the fiscal year ended December 31, 2020, the Series incurred distribution expenses of \$9,848,000 payable to certain life insurance companies under the respective Plans. Accrued and unpaid distribution expenses were \$859,000.

Insurance administration fee – The insurance companies for which the fund’s Class P1 and P2 shares are available provide certain administrative services for the separate accounts that hold the shares of the fund and the contractholders for which the shares of the fund are beneficially owned as underlying investments of such contractholders annuities. These services include, but are not limited to, record maintenance, shareholder communications and transactional services.

These services are provided pursuant to an Insurance Administrative Services Plan adopted by the Series relating to the fund’s Class P1 and P2 shares. Under this agreement, the insurance company receives .25% of the fund’s average daily net assets attributable to the appropriate share class. During the fiscal year ended December 31, 2020, the Series incurred insurance administration fees of \$4,947,000 for Class P1 shares and \$9,848,000 for Class P2 shares.

Compensation to insurance companies – American Funds Distributors, Inc., at its expense, currently makes payments to certain of the insurance companies listed below that use the Series as the underlying investment in insurance contracts. These payments generally cover additional compensation (as described in the prospectus) and/or expenses associated with education and training meetings sponsored by American Funds Distributors, Inc. for insurance company sales forces.

Execution of portfolio transactions

The fund does not incur any brokerage commissions for purchasing shares of the underlying fund. However, the fund may incur brokerage commissions and/or investment dealer concessions when purchasing short-term debt securities. Portfolio transactions for the fund may be executed as part of concurrent authorizations to purchase or sell the same security for other funds served by the investment adviser, or for trusts or other accounts served by affiliated companies of the investment adviser. When such concurrent authorizations occur, the objective is to allocate the executions in an equitable manner.

Specific decisions to purchase or sell futures contracts for the fund are made by the portfolio managers of the subadviser. Purchases and sales of futures contracts for the fund will be effected through executing brokers and FCMs that specialize in the types of futures contracts that the fund expects to hold. The investment adviser will use reasonable efforts to choose executing brokers and FCMs capable of providing the services necessary to obtain the most favorable price and execution available. The full range and quality of services available will be considered in making these determinations. The subadviser and investment adviser will monitor the executing brokers and FCMs used for purchases and sales of futures contracts for their ability to execute trades based on many factors, such as the size of the orders, the difficulty of executions, the operational facilities of the firm involved and other factors.

The fund is required to disclose information regarding investments in the securities of its "regular" broker-dealers (or parent companies of its regular broker-dealers) that derive more than 15% of their revenue from broker-dealer, underwriter or investment adviser activities. A regular broker-dealer is (a) one of the 10 broker-dealers that received from the fund the largest amount of brokerage commissions by participating, directly or indirectly, in the fund's portfolio transactions during the fund's most recently completed fiscal year; (b) one of the 10 broker-dealers that engaged as principal in the largest dollar amount of portfolio transactions of the fund during the fund's most recently completed fiscal year; or (c) one of the 10 broker-dealers that sold the largest amount of securities of the fund during the fund's most recently completed fiscal year.

At the end of the fund's most recent fiscal year, the fund did not have investments in securities of any of its regular broker-dealers.

Brokerage commissions paid (net of any reimbursements described below) by the fund for the fiscal years ended December 31, 2020, 2019 and 2018 were:

	Fiscal year ended		
	2020	2019	2018
Managed Risk Growth Fund	\$54,000	\$14,000	\$23,000
Managed Risk International Fund	113,000	5,000	9,000
Managed Risk Washington Mutual Investors Fund	39,000	12,000	24,000
Managed Risk Growth-Income Fund	333,000	56,000	32,000
Managed Risk Asset Allocation Fund	259,000	44,000	210,000

Increases (or decreases) in the dollar amount of brokerage commissions paid by the fund over the last three fiscal years resulted from increases (or decreases) in the volume of trading activity.

For information regarding the policies with respect to the execution of portfolio transactions of the underlying fund, please see the statement of additional information for the underlying fund.

Disclosure of portfolio holdings

The Series' investment adviser, on behalf of the funds, has adopted policies and procedures with respect to the disclosure of information about the funds' portfolio securities. These policies and procedures have been reviewed by the Series' board of trustees, and compliance will be periodically assessed by the board in connection with reporting from the Series' Chief Compliance Officer.

Under these policies and procedures, each fund's complete list of portfolio holdings available for public disclosure, dated as of the end of each calendar quarter, is permitted to be posted on the Capital Group website (capitalgroup.com/afis) no earlier than the 10th day after such calendar quarter. In practice, the publicly disclosed portfolio is typically posted on the Capital Group website within 30 days after the end of the calendar quarter. The publicly disclosed portfolio may exclude certain securities when deemed to be in the best interest of the fund as permitted by applicable regulations. Such portfolio holdings information may be disclosed to any person pursuant to an ongoing arrangement to disclose portfolio holdings information to such person no earlier than one day after the day on which the information is posted on the Capital Group website.

Certain intermediaries are provided additional information about the fund's management team, including information on the fund's portfolio securities they have selected. This information is provided to larger intermediaries that require the information to make the fund available for investment on the firm's platform. Intermediaries receiving the information are required to keep it confidential and use it only to analyze the fund.

The Series' custodian, outside counsel, auditor, financial printers, proxy voting service providers, pricing information vendors, consultants or agents operating under a contract with the investment adviser or its affiliates, co-litigants (such as in connection with a bankruptcy proceeding related to a fund holding) and certain other third parties described below, each of which requires portfolio holdings information for legitimate business and fund oversight purposes, may receive fund portfolio holdings information earlier. See the "General information" section in this statement of additional information for further information about the Series' custodian, outside counsel and auditor.

Each fund's portfolio holdings, dated as of the end of each calendar month, are made available to insurance companies that use the funds as underlying investments in their variable annuity contracts and variable life insurance policies. Monthly holdings are made available to help the insurance companies evaluate the funds for inclusion in the contracts and life insurance policies they offer and to evaluate and manage the insurance guarantees offered under their insurance contracts. Monthly holdings may be provided to insurance companies no earlier than the 10th day after the end of the calendar month. In practice, monthly holdings are provided within 30 days after the end of the calendar month. Monthly holdings may also be provided to the fund's subadviser. Insurance companies may receive a list of the futures contracts and other investments that make up a fund's managed risk strategy each business day. Holdings may also be disclosed more frequently to certain statistical and data collection agencies including Morningstar, Lipper, Inc., Value Line, Vickers Stock Research, Bloomberg and Thomson Financial Research. Information on certain portfolio characteristics of the funds and underlying funds are also provided to the insurance companies and the fund's subadviser each business day.

Affiliated persons of the Series, including officers of the Series and employees of the investment adviser and its affiliates, who receive portfolio holdings information are subject to restrictions and limitations on the use and handling of such information pursuant to applicable codes of ethics, including requirements not to trade in securities based on confidential and proprietary investment information, to maintain the confidentiality of such information, and to pre-clear securities trades and report securities transactions activity, as applicable. For more information on these restrictions and limitations, please see the "Code of ethics" section in this statement of additional information and the

Code of Ethics. Third-party service providers of the Series and other entities, as described in this statement of additional information, receiving such information are subject to confidentiality obligations and obligations that would prohibit them from trading in securities based on such information. When portfolio holdings information is disclosed other than through the Capital Group website to persons not affiliated with the Series, such persons will be bound by agreements (including confidentiality agreements) or fiduciary or other obligations that restrict and limit their use of the information to legitimate business uses only. None of the Series, its investment adviser or any of their affiliates receives compensation or other consideration in connection with the disclosure of information about portfolio securities.

Subject to board policies, the authority to disclose a fund's portfolio holdings, and to establish policies with respect to such disclosure, resides with the appropriate investment-related committees of the Series' investment adviser. In exercising their authority, the committees determine whether disclosure of information about the funds' portfolio securities is appropriate and in the best interest of fund shareholders. The investment adviser has implemented policies and procedures to address conflicts of interest that may arise from the disclosure of fund holdings. For example, the investment adviser's code of ethics specifically requires, among other things, the safeguarding of information about fund holdings and contains prohibitions designed to prevent the personal use of confidential, proprietary investment information in a way that would conflict with fund transactions. In addition, the investment adviser believes that its current policy of not selling portfolio holdings information and not disclosing such information to unaffiliated third parties until such holdings have been made public on the Capital Group website (other than to certain Series service providers and other third parties for legitimate business and fund oversight purposes) helps reduce potential conflicts of interest between fund shareholders and the investment adviser and its affiliates.

Price of shares

Shares are purchased at the offering price or sold at the net asset value price next determined after the purchase or sell order is received and accepted by the Series or its designee. Orders received by the Series or authorized designee after the time of the determination of the net asset value will be entered at the next calculated offering price.

The price you pay for shares, the offering price, is based on the net asset value per share, which is calculated once daily as of the close of regular trading on the New York Stock Exchange, normally 4 p.m. New York time, each day the New York Stock Exchange is open. If the New York Stock Exchange makes a scheduled (e.g. the day after Thanksgiving) or an unscheduled close prior to 4 p.m. New York time, the net asset value of the fund will be determined at approximately the time the New York Stock Exchange closes on that day. If on such a day market quotations and prices from third-party pricing services are not based as of the time of the early close of the New York Stock Exchange but are as of a later time (up to approximately 4 p.m. New York time), for example because the market remains open after the close of the New York Stock Exchange, those later market quotations and prices will be used in determining the fund's net asset value.

Orders in good order received after the New York Stock Exchange closes (scheduled or unscheduled) will be processed at the net asset value (plus any applicable sales charge) calculated on the following business day. The New York Stock Exchange is currently closed on weekends and on the following holidays: New Year's Day; Martin Luther King Jr. Day; Presidents' Day; Good Friday; Memorial Day; Independence Day; Labor Day; Thanksgiving; and Christmas Day. Each share class of the fund has a separately calculated net asset value (and share price). The fund's investment adviser delivers the net asset value every day it is calculated to each insurance company that offers such fund as an underlying investment to its variable contracts by, for example, email, direct electronic transmission or facsimile or through the systems of the National Securities Clearing Corporation.

As noted in the fund's prospectus, the principal assets of the fund consists of investments in the underlying fund and exchange-traded futures and put options.

Exchange-traded futures and options are generally valued at the official settlement price of, or the last reported sale price on, the exchange or market on which such instruments are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades.

The investments in the underlying fund are reflected in the net assets of the fund on the day of investment. All portfolio securities of the underlying fund are valued, and the net asset values per share for each share class are determined, as indicated below.

The underlying fund is priced based on the net asset value of the underlying fund, calculated as of the close of regular trading on the New York Stock Exchange, normally 4 p.m. New York time, each day the New York Stock Exchange is open. Equity securities, including depositary receipts, are generally valued at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades.

Fixed income securities, including short-term securities, are generally valued at prices obtained from one or more pricing vendors. The pricing vendors base prices on, among other things, benchmark yields, transactions, bids, offers, quotations from dealers and trading systems, new issues, underlying equity of the issuer, interest rate volatilities, spreads and other relationships observed in the markets

among comparable securities and proprietary pricing models such as yield measures calculated using factors such as cash flows, prepayment information, default rates, delinquency and loss assumptions, financial or collateral characteristics or performance, credit enhancements, liquidation value calculations, specific deal information and other reference data. The fund's investment adviser performs certain checks on vendor prices prior to calculation of the fund's net asset value. When the investment adviser deems it appropriate to do so (such as when vendor prices are unavailable or not deemed to be representative), fixed income securities will be valued in good faith at the mean quoted bid and asked prices that are reasonably and timely available (or bid prices, if asked prices are not available) or at prices for securities of comparable maturity, quality and type.

Securities with both fixed income and equity characteristics (e.g., convertible bonds, preferred stocks, units comprised of more than one type of security, etc.), or equity securities traded principally among fixed income dealers, are generally valued in the manner described above for either equity or fixed income securities, depending on which method is deemed most appropriate by the investment adviser.

Forward currency contracts are valued at the mean of representative quoted bid and asked prices, generally based on prices supplied by one or more pricing vendors.

Futures contracts are generally valued at the official settlement price of, or the last reported sale price on, the principal exchange or market on which such instruments are traded, as of the close of business on the day the contracts are being valued or, lacking any sales, at the last available bid price.

Swaps, including both interest rate swaps and positions in credit default swap indices, are valued using market quotations or valuations provided by one or more pricing vendors.

Assets or liabilities initially expressed in terms of currencies other than U.S. dollars are translated prior to the next determination of the net asset value of the fund's shares into U.S. dollars at the prevailing market rates.

Securities and other assets for which representative market quotations are not readily available or are considered unreliable by the investment adviser are valued at fair value as determined in good faith under fair value guidelines adopted by authority of the Series' board. Subject to board oversight, the Series' board has appointed the fund's investment adviser to make fair valuation determinations, which are directed by a valuation committee established by the fund's investment adviser. The board receives regular reports describing fair-valued securities and the valuation methods used.

The valuation committee has adopted guidelines and procedures (consistent with SEC rules and guidance) to consider certain relevant principles and factors when making fair value determinations. As a general principle, securities lacking readily available market quotations, or that have quotations that are considered unreliable by the investment adviser, are valued in good faith by the valuation committee based upon what the fund might reasonably expect to receive upon their current sale. Fair valuations and valuations of investments that are not actively trading involve judgment and may differ materially from valuations that would have been used had greater market activity occurred. The valuation committee considers relevant indications of value that are reasonably and timely available to it in determining the fair value to be assigned to a particular security, such as the type and cost of the security, contractual or legal restrictions on resale of the security, relevant financial or business developments of the issuer, actively traded similar or related securities, conversion or exchange rights on the security, related corporate actions, significant events occurring after the close of trading in the security and changes in overall market conditions. The valuation committee employs additional fair value procedures to address issues related to equity securities that trade principally in markets outside the United States. Such securities may trade in markets that open and close at different times, reflecting time zone differences. If significant events occur after the close of a market (and before the

fund's net asset values are next determined) which affect the value of equity securities held in the fund's portfolio, appropriate adjustments from closing market prices may be made to reflect these events. Events of this type could include, for example, earthquakes and other natural disasters or significant price changes in other markets (e.g., U.S. stock markets).

Each class of shares represents interests in the same portfolio of investments and is identical in all respects to each other class, except for differences relating to distribution, service and other charges and expenses, certain voting rights, differences relating to eligible investors, the designation of each class of shares, conversion features and exchange privileges. Expenses attributable to the fund, but not to a particular class of shares, are borne by each class pro rata based on relative aggregate net assets of the classes. Expenses directly attributable to a class of shares are borne by that class of shares. Liabilities attributable to particular share classes, such as liabilities for repurchases of fund shares, are deducted from total assets attributable to such share classes.

Net assets so obtained for each share class are then divided by the total number of shares outstanding of that share class, and the result, rounded to the nearest cent, is the net asset value per share for that class.

Taxes and distributions

Taxation as a regulated investment company – The fund intends to qualify each year as a “regulated investment company” under Subchapter M of the Internal Revenue Code (“Code”) so that it will not be liable for federal tax on income and capital gains distributed to shareholders. In order to qualify as a regulated investment company, and avoid being subject to federal income taxes, the fund intends to distribute substantially all of its net investment income and realized net capital gains on a fiscal year basis, and intends to comply with other tests applicable to regulated investment companies under Subchapter M, including the asset diversification test. The asset diversification test requires that at the close of each quarter of the fund’s taxable year that (i) at least 50% of the fund’s assets be invested in cash and cash items, government securities, securities of other funds and other securities which, with respect to any one issuer, represent neither more than 5% of the assets of the fund nor more than 10% of the voting securities of the issuer, and (ii) no more than 25% of the fund’s assets be invested in the securities of any one issuer (other than government securities or the securities of other funds), the securities (other than the securities of other funds) of two or more issuers that the fund controls and are engaged in similar trades or businesses, or the securities of one or more qualified publicly traded partnerships.

The Code includes savings provisions allowing the fund to cure inadvertent failures of certain qualification tests required under Subchapter M. However, should the fund fail to qualify under Subchapter M, the fund would be subject to federal, and possibly state, corporate taxes on its taxable income and gains.

The fund is subject to a set of asset diversification requirements applicable to insurance company separate accounts and their underlying funding vehicles. To satisfy these diversification requirements, as of the end of each calendar quarter or within 30 days thereafter, the fund must (a) be qualified as a “regulated investment company”; and (b) have either (i) no more than 55% of the total value of its assets in cash and cash equivalents, government securities and securities of other regulated investment companies; or (ii) no more than 55% of its total assets represented by any one investment, no more than 70% by any two investments, no more than 80% by any three investments, and no more than 90% by any four investments. For this purpose all securities of the same issuer are considered a single investment, and each agency or instrumentality of the U.S. government is treated as a separate issuer of securities. The Series intends to comply with these regulations. If the fund should fail to comply with these regulations, Contracts invested in the fund will not be treated as annuity, endowment or life insurance contracts under the Code.

The fund may declare a capital gain distribution consisting of the excess of net realized long-term capital gains over net realized short-term capital losses. Net capital gains for a fiscal year are computed by taking into account any capital loss carryforward of the fund.

Tax consequences of investing in non-U.S. securities – Dividend and interest income received by the fund from sources outside the United States may be subject to withholding and other taxes imposed by such foreign jurisdictions. Tax conventions between certain countries and the United States, however, may reduce or eliminate these foreign taxes. Some foreign countries impose taxes on capital gains with respect to investments by foreign investors.

Foreign currency gains and losses, including the portion of gain or loss on the sale of debt securities attributable to fluctuations in foreign exchange rates, are generally taxable as ordinary income or loss. These gains or losses may increase or decrease the amount of dividends payable by the fund to shareholders. A fund may elect to treat gain and loss on certain foreign currency contracts as capital gain and loss instead of ordinary income or loss.

Tax consequences of investing in derivatives – The fund may enter into transactions involving derivatives, such as futures, options, swaps and forward contracts. Special tax rules may apply to these types of transactions that could defer losses to the fund, accelerate the fund’s income, alter the holding period of certain securities or change the classification of capital gains. These tax rules may therefore impact the amount, timing and character of fund distributions.

General information

Custodian of assets – Securities and cash owned by the fund, including proceeds from the sale of shares of the fund and of securities in the fund's portfolio, are held by State Street Bank and Trust Company, One Lincoln Street, Boston, MA 02111, as custodian. Non-U.S. securities may be held by the custodian in non-U.S. banks or securities depositories or foreign branches of U.S. banks.

Transfer agent services – American Funds Service Company, a wholly owned subsidiary of the investment adviser, maintains the records of each insurance company's separate account, processes purchases and redemptions of the fund's shares, acts as dividend and capital gain distribution disbursing agent, and performs other related shareholder service functions. The principal office of American Funds Service Company is located at 6455 Irvine Center Drive, Irvine, CA 92618. Transfer agent fees are paid according to a fee schedule, based on the number of accounts serviced, contained in a Shareholder Services Agreement between the fund and American Funds Service Company. American Funds Service Company was paid a transfer agent fee of less than \$1,000 for Class P1 shares and less than \$1,000 for Class P2 shares for the 2020 fiscal year.

Independent registered public accounting firm – PricewaterhouseCoopers LLP, 601 South Figueroa Street, Los Angeles, CA 90017, serves as the Series' independent registered public accounting firm, providing audit services, preparation of tax returns and review of certain documents to be filed with the SEC. The selection of the Series' independent registered public accounting firm is reviewed and determined annually by the board of trustees.

Independent legal counsel – Morgan, Lewis & Bockius LLP, One Federal Street, Boston, MA 02110-1726, serves as independent legal counsel ("counsel") for the Series and for trustees who are not interested persons (as defined by the 1940 Act) of the Series. A determination with respect to the independence of the Series' counsel will be made at least annually by the independent trustees of the Series, as prescribed by applicable 1940 Act rules.

Prospectuses and reports to shareholders – The Series' fiscal year ends on December 31. Contract owners are provided updated prospectuses or summary prospectuses by their insurance provider annually and at least semiannually with reports showing the funds' investment portfolios or summary investment portfolios, financial statements and other information. The Series' annual financial statements are audited by the independent registered public accounting firm of PricewaterhouseCoopers LLP.

Code of ethics – The Series, Capital Research and Management Company and its affiliated companies have adopted codes of ethics that allow for personal investments, including securities in which the funds of the Series may invest from time to time. These codes include a ban on acquisitions of securities pursuant to an initial public offering; restrictions on acquisitions of private placement securities; pre-clearance and reporting requirements; review of duplicate confirmation statements; annual recertification of compliance with codes of ethics; blackout periods on personal investing for certain investment personnel; a ban on short-term trading profits for investment personnel; limitations on service as a director of publicly traded companies; disclosure of personal securities transactions; and policies regarding political contributions. The subadviser has adopted a code of ethics which restricts, subject to certain conditions, personnel of the subadviser from investing in certain securities.

Shareholder and trustee responsibility – Under the laws of certain states, including Massachusetts, where the Series was organized, and California, where the Series' principal office is located, shareholders of a Massachusetts business trust may, under certain circumstances, be held personally liable as partners for the obligations of the Series. However, the risk of a shareholder incurring any financial loss on account of shareholder liability is limited to circumstances in which the Series itself would be unable to meet its obligations. The declaration of trust contains an express disclaimer of

shareholder liability for acts or obligations of the Series and provides that notice of the disclaimer may be given in each agreement, obligation, or instrument which is entered into or executed by the Series or trustees. The declaration of trust provides for indemnification out of Series property of any shareholder personally liable for the obligations of the Series and also provides for the Series to reimburse such shareholder for all legal and other expenses reasonably incurred in connection with any such claim or liability.

Under the declaration of trust, the trustees or officers are not liable for actions or failure to act; however, they are not protected from liability by reason of their willful misfeasance, bad faith, gross negligence, or reckless disregard of the duties involved in the conduct of their office. The Series will provide indemnification to its trustees and officers as authorized by its by-laws and by the 1940 Act and the rules and regulations thereunder.

Registration statement – A registration statement has been filed with the Securities and Exchange Commission under the Securities Act of 1933 and the 1940 Act with respect to the fund. The prospectus and this statement of additional information do not contain all information set forth in the registration statement, its amendments and exhibits, to which reference is made for further information concerning the fund. Statements contained in the prospectus and this statement of additional information as to the content of the contracts issued through the separate accounts and other legal instruments are summaries. For a complete statement of the terms thereof, reference is made to the registration statements of the separate accounts and contracts as filed with the Securities and Exchange Commission.

Authorized shares – The Series was organized as a Massachusetts business trust which permits the fund to issue an unlimited number of shares of beneficial interest of one or more classes.

Redemption of shares – While payment of redemptions normally will be in cash, the Series' declaration of trust permits payment of the redemption price wholly or partly with portfolio securities or other fund assets under conditions and circumstances determined by the Series' board of trustees. For example, redemptions could be made in this manner if the board determined that making payments wholly in cash over a particular period would be unfair and/or harmful to other Series shareholders.

Voting rights – Shareholders have one vote per share owned. In accordance with current laws, it is anticipated that an insurance company issuing a variable contract that participates in a fund will request voting instructions from variable contract owners and will vote shares or other voting interests in the separate account in accordance with voting instructions received, and will vote shares or other voting interests not received in proportion to the voting instructions received by all separate accounts. In addition, fund shares held directly by an insurance company, if any, will be voted in proportion to the voting instructions received by all separate accounts. As a result of proportional voting, the vote of a small number of contract holders could determine the outcome of a shareholder vote.

Financial statements – The fund's audited financial statements, including the related notes thereto, dated December 31, 2020, are incorporated by reference in the statement of additional information from the fund's Form N-CSR dated as of December 31, 2020.

Appendix

The following descriptions of debt security ratings are based on information provided by Moody's Investors Service, Standard & Poor's Ratings Services and Fitch Ratings, Inc.

Description of bond ratings

Moody's Long-term rating scale

Aaa

Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa

Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A

Obligations rated A are considered upper-medium grade and are subject to low credit risk.

Baa

Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba

Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B

Obligations rated B are considered speculative and are subject to high credit risk.

Caa

Obligations rated Caa are judged to be speculative and of poor standing and are subject to very high credit risk.

Ca

Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C

Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category. Additionally, a "(hyb)" indicator is appended to all ratings of hybrid securities issued by banks, insurers, finance companies and securities firms.

**Standard & Poor's
Long-term issue credit ratings**

AAA

An obligation rated AAA has the highest rating assigned by Standard & Poor's. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA

An obligation rated AA differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

A

An obligation rated A is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB

An obligation rated BBB exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

BB, B, CCC, CC, and C

Obligations rated BB, B, CCC, CC, and C are regarded as having significant speculative characteristics. BB indicates the least degree of speculation and C the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

BB

An obligation rated BB is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

B

An obligation rated B is more vulnerable to nonpayment than obligations rated BB, but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

CCC

An obligation rated CCC is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

CC

An obligation rated CC is currently highly vulnerable to nonpayment. The CC rating is used when a default has not occurred, but Standard & Poor's expects default to be a virtual certainty, regardless of the anticipated time to default.

C

An obligation rated C is currently highly vulnerable to nonpayment, and the obligation is expected to have lower relative seniority or lower ultimate recovery compared to obligations that are rated higher.

D

An obligation rated D is in default or in breach of an imputed promise. For non-hybrid capital instruments, the D rating category is used when payments on an obligation are not made on the date due, unless Standard & Poor's believes that such payments will be made within five business days in the absence of a stated grace period or within the earlier of the stated grace period or 30 calendar days. The D rating also will be used upon the filing of a bankruptcy petition or the taking of similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation's rating is lowered to D if it is subject to a distressed exchange offer.

Plus (+) or minus (-)

The ratings from AA to CCC may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

NR

This indicates that no rating has been requested, that there is insufficient information on which to base a rating, or that Standard & Poor's does not rate a particular obligation as a matter of policy.

Fitch Ratings, Inc.
Long-term credit ratings

AAA

Highest credit quality. AAA ratings denote the lowest expectation of default risk. They are assigned only in case of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA

Very high credit quality. AA ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A

High credit quality. A ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to changes in circumstances or in economic conditions than is the case for higher ratings.

BBB

Good credit quality. BBB ratings indicate that expectations of default risk are low. The capacity for payment of financial commitments is considered adequate but adverse changes in circumstances and economic conditions are more likely to impair this capacity.

BB

Speculative. BB ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial flexibility exists which supports the servicing of financial commitments.

B

Highly speculative. B ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

CCC

Substantial credit risk. Default is a real possibility.

CC

Very high levels of credit risk. Default of some kind appears probable.

C

Exceptionally high levels of credit risk. Default is imminent or inevitable, or the issuer is in standstill. Conditions that are indicative of a C category rating for an issuer include:

- The issuer has entered into a grace or cure period following nonpayment of a material financial obligation;
- The issuer has entered into a temporary negotiated waiver or standstill agreement following a payment default on a material financial obligation; or
- Fitch Ratings otherwise believes a condition of RD or D to be imminent or inevitable, including through the formal announcement of a distressed debt exchange.

RD

Restricted default. RD ratings indicate an issuer that in Fitch Ratings' opinion has experienced an uncured payment default on a bond, loan or other material financial obligation but which has not entered into bankruptcy filings, administration, receivership, liquidation or other formal winding up procedure, and which has not otherwise ceased operating. This would include:

- The selective payment default on a specific class or currency of debt;
- The uncured expiry of any applicable grace period, cure period or default forbearance period following a payment default on a bank loan, capital markets security or other material financial obligation;
- The extension of multiple waivers or forbearance periods upon a payment default on one or more material financial obligations, either in series or in parallel; or
- Execution of a distressed debt exchange on one or more material financial obligations.

D

Default. D ratings indicate an issuer that in Fitch Ratings' opinion has entered into bankruptcy filings, administration, receivership, liquidation or other formal winding up procedure, or which has otherwise ceased business.

Default ratings are not assigned prospectively to entities or their obligations; within this context, nonpayment on an instrument that contains a deferral feature or grace period will generally not be considered a default until after the expiration of the deferral or grace period, unless a default is otherwise driven by bankruptcy or other similar circumstance, or by a distressed debt exchange.

Imminent default typically refers to the occasion where a payment default has been intimated by the issuer, and is all but inevitable. This may, for example, be where an issuer has missed a scheduled payment, but (as is typical) has a grace period during which it may cure the payment default. Another alternative would be where an issuer has formally announced a distressed debt exchange, but the date of the exchange still lies several days or weeks in the immediate future.

In all cases, the assignment of a default rating reflects the agency's opinion as to the most appropriate rating category consistent with the rest of its universe of ratings, and may differ from the definition of default under the terms of an issuer's financial obligations or local commercial practice.

Note: The modifiers "+" or "-" may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the AAA long-term rating category, or to categories below B.

Description of commercial paper ratings

Moody's

Global short-term rating scale

P-1

Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.

P-2

Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

P-3

Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

NP

Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

Standard & Poor's

Commercial paper ratings (highest three ratings)

A-1

A short-term obligation rated A-1 is rated in the highest category by Standard & Poor's. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A-2

A short-term obligation rated A-2 is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A-3

A short-term obligation rated A-3 exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.
